Description

This smart touchless waste bin is ideal for those situations when you don't want to cope with awkward lids while holding a handful of rubbish, and when you want a hygienic way of disposing of it. Ninestars waste bin is powered by state-of-the-art infrared technology that detects your presence and automatically opens and closes the lid. With a touch-free, motion-sensing open/close mechanism, you can reduce contact with germs and enjoy the ease of use while your hands are full.

Place it wherever you like. With a compact frame and rectangular design, it is small enough to fit under the sink, and inside most kitchen cabinets.

Most hygiene, mess and spill problems occur because the bin bag slips inside the bin. This is no longer the case with our motion sensor waste bin. It also features non-slip feet and an inner bucket that makes it easier to empty and also securely holds the bag. Plus the design completely seals in odours!
