

Stainless Steel Kitchen Waste Bin 80L

A HYGIENIC WASTE DISPOSAL TOUCH-FREE INTELLIGENT AUTOMATIC WASTE MANAGEMENT WITH INFRARED MOTION SENSOR.

No Hands, No Touch

The motion infrared sensors eliminate germ-spreading by automatic opening and closing of the bin lids.

Easy Maintenance

The capacious kitchen bin is tall, elegant and streamlined with a 430-grade stainless steel body with a lightweight removable lid, and a non-skid bottom.

Long-lasting Battery Life

The auto lid has a manual override and is lockable to prevent pets and children accessing contents.

Lightweight Removable Retaining Plastic Ring Holder

The convenient bag holder makes it super-easy to change standard bin liners.

Futuristic Design

A small footprint but capable of containing 80-litres of domestic rubbish. It closes softly and seals in unpleasant odours.

Description

We are delighted to introduce our 2021 next-generation range of extra-large automatic waste bins for both domestic and commercial environments.

The key feature is the infrared motion sensor that allows the opening on approach without the need to press or touch the bin top lid. The sensors sense your presence when in use, and once you have moved away from the automatic bin, it closes silently. Its rather sleek, tapered, flat back and elegant in design with a small footprint whilst cleverly having an extra-large capacity to store up to 80 litres of household rubbish waste.

The dustbin is cleverly designed with a broader neck at the opening, allowing the removal of waste paper rubbish from the body of the dustbin without having to engage in a tug of war.

The construction of the body uses silver stainless satin steel coated with chemicals to prevent finger marks and unwanted smudges. The upper bin top lid offers soft and silent closing whilst sealing in unpleasant odours. Additional features such as manual override, locking system are standard, all functional from one central control panel.
