Automatic Trash Bin With Motion Sensor Technology

CES 2020 AWARD WINNING SELF BAGGING, REPLACING AND SEALING SENSOR WASTE BIN

ALL IN ONE, SELF CLEANING BIN

The Townnew rubbish bin presents the next generation in self sealing bin technology. This motion sensor bin uses thermoplastic sealing technology, completely sealing bags automatically. Once removed, the Townnew bin replaces the bag automatically.

PRELOADED BAG CARTRIDGE

Each automatic dustbin comes preloaded with a bin bag cartridge. Each cartridge contains 25 durable and biodegradable bin liners. Once all trash liners are used you can purchase refill cartridges for more hassle free rubbish bags

AUTOMATIC MOTION CONTROL

All our automatic bins come with an infrared sensor that detects movement and opens up for easy bag retrieval. The Townnew smart bin has a motion range of 35cm so it will only open up when needed.

PROTECTS AGAINST OVERLOADING

The Townnew smart trash comes with a feature that detects when it has reached full capacity. To avoid spillage, the touchless dust bin will lift and pull the bag up, covering the rubbish and sealing it neatly.

LONG BATTERY LIFE

Our automatic sensor bin functions on a 2000 mAH rechargeable battery. Each battery can last a full month before you need to recharge. The Townnew sensor bin comes with LED indicators that indicate when recharging is needed.

Description

Automatic Trash Bin With Motion Sensor Technology – Self Sealing and Self Replacing – Smart Touchless Waste Bin for Kitchen, Office, Living Room, Bathroom, Bedroom and More – Preloaded with Durable recyclable & Biodegradable bin Liners –15.5L Capacity – Available in white and Teal finish

A new generation of automatic waste disposal with the Townnew waste bin

In the grand hierarchy of household jobs, emptying out the waste would rank somewhere at the bottom in terms of enjoyment. Therefore, why not have a garbage can that does all the dirty work for you? The new model is the world's first self-sealing and self-replacing garbage bin. The electric waste bin requires no manual handling: it automatically seals the biodegradable recyclable bags using thermoplastic sealing technology when full and replaces them with a new one. All you need to do is press the front button, so the touchless bin seals the bag and then open the lid to remove the sealed compostable trash bag. Once the lid is closed a new recyclable bin bag will extend and fill the trash can, ready for whatever you decide to throw away next.

The self-bagging, sealing and changing bin with a host of features

The trash bin comes with a range of features that make it a must for any home or commercial space. Its infrared sensor allows you to open the lid without using your hands, keeping your hands hygienic and germ free. You can easily switch between auto and manual mode by pressing the front button, so you can keep the lid open for as long as you need. This sensor bin can last up to a month on a single 10-hour charge and being cordless you can place it wherever you need. The sensor bin also comes with an anti-slip balancing foot that prevents it from tipping over and spilling its contents.

Automatic waste bin suitable for any location

The electric trash can measure 24 x 31 x 40.2 cm, weighs 5.1 kg and has a capacity of 15.5 L. As such, it is small and lightweight enough to easily fit in any home, office or anywhere you choose. This motion sensor bin comes in a sleek rectangular design and subtle white or teal colour that will look attractive in your chosen space. Available in white or teal
