Scarlet Electrolysis.com
Permanent Hair Removal
For Any Skin Type

FOLLOWING YOUR ELECTROLYSIS TREATMENT

Aftercare Instructions:

- ⊗ Avoid unnecessarily touching or scratching the area.
- ⊗ Avoid soap and make-up over the treated area for 24 hours as they could cause irritation.
- ⊗ Avoid friction on the area (tight clothes).
- ⊗ Avoid exposing the treated area to U.V. rays at least 24 hours before treatment and 24 hours after treatment.
- ⊗ Avoid perfume or alcohol-based products.
- ⊗ Avoid excessively hot baths.
- ⊗ Avoid rich, greasy lotions or creams.
- ⊗ Avoid using deodorant for the first 48 hours.
- ⊗ Apply a cold water compress, if necessary.
- ⊗ Apply sunscreen after 24 hours, if necessary.

If small scabs appear, do not scratch them away. Allow them to fall off naturally. This is nature's way of healing the follicle that has been treated.

*If you are prevented from coming in as soon as you would like for your next treatment, **DO NOT TWEEZE!** The offending hair can be clipped off with small scissors and/or shaved.*

PLEASE REMEMBER:

- ② Some re-growth is to be expected after your first treatment.
- ② Hair grows in different intervals, so be sure to book another appointment when the first re-growth occurs, the roots are shorter and weaker and therefore can be treated more effectively.

WHAT IS NORMAL AFTER A GOOD TREATMENT?

- ② Redness on the treated area.
- ② Warm sensation and/or prickly feeling depending on the treated area.

*These are temporary reactions.
They should disappear in the
hours following treatment.*
