

MDPortals Compendium™

ACHIEVE SUCCESS IN VALUE-BASED CARE WITH A **UNIFIED HEALTH RECORD**

Successfully manage populations with a comprehensive view of each patient's health history, delivered automatically with the MDPortals Compendium™. The multi-sourced, longitudinal health history enables your care team to deliver high-quality, cost-effective care in the value-based environment. Capture each patient's disease burden with automated, clinician-approved suggestions for ICD-10 codes that result in more accurate Risk Adjustment Factor (RAF) scores and enhanced revenue capture potential.

MDPortals is transforming risk adjustment

Our knowledge platform collects real-time patient data from multiple EHRs, health information exchanges, diagnostic laboratories, pharmacies, social determinants of health databases, and faxed documents. Proprietary machine learning algorithms aggregate data from internal and external sources to provide deep insights into the patient's health history. By drilling down into the underlying documents, you can better address gaps in care and develop optimal care plans.

The result? Measurable improvement in outcomes, lower administrative burdens, and risk-adjusted reimbursement that actually reflects your excellent clinical care.

What the MDPortals Compendium Offers:

Existing connections to 90% of acute-care and 60% of ambulatory-care EHRs

Real-time access to 300+ million consolidated patient records

Aggregated patient information from multiple sources in a **single, unified display**

C-CDA converted from faxes using optical character recognition and natural language processing

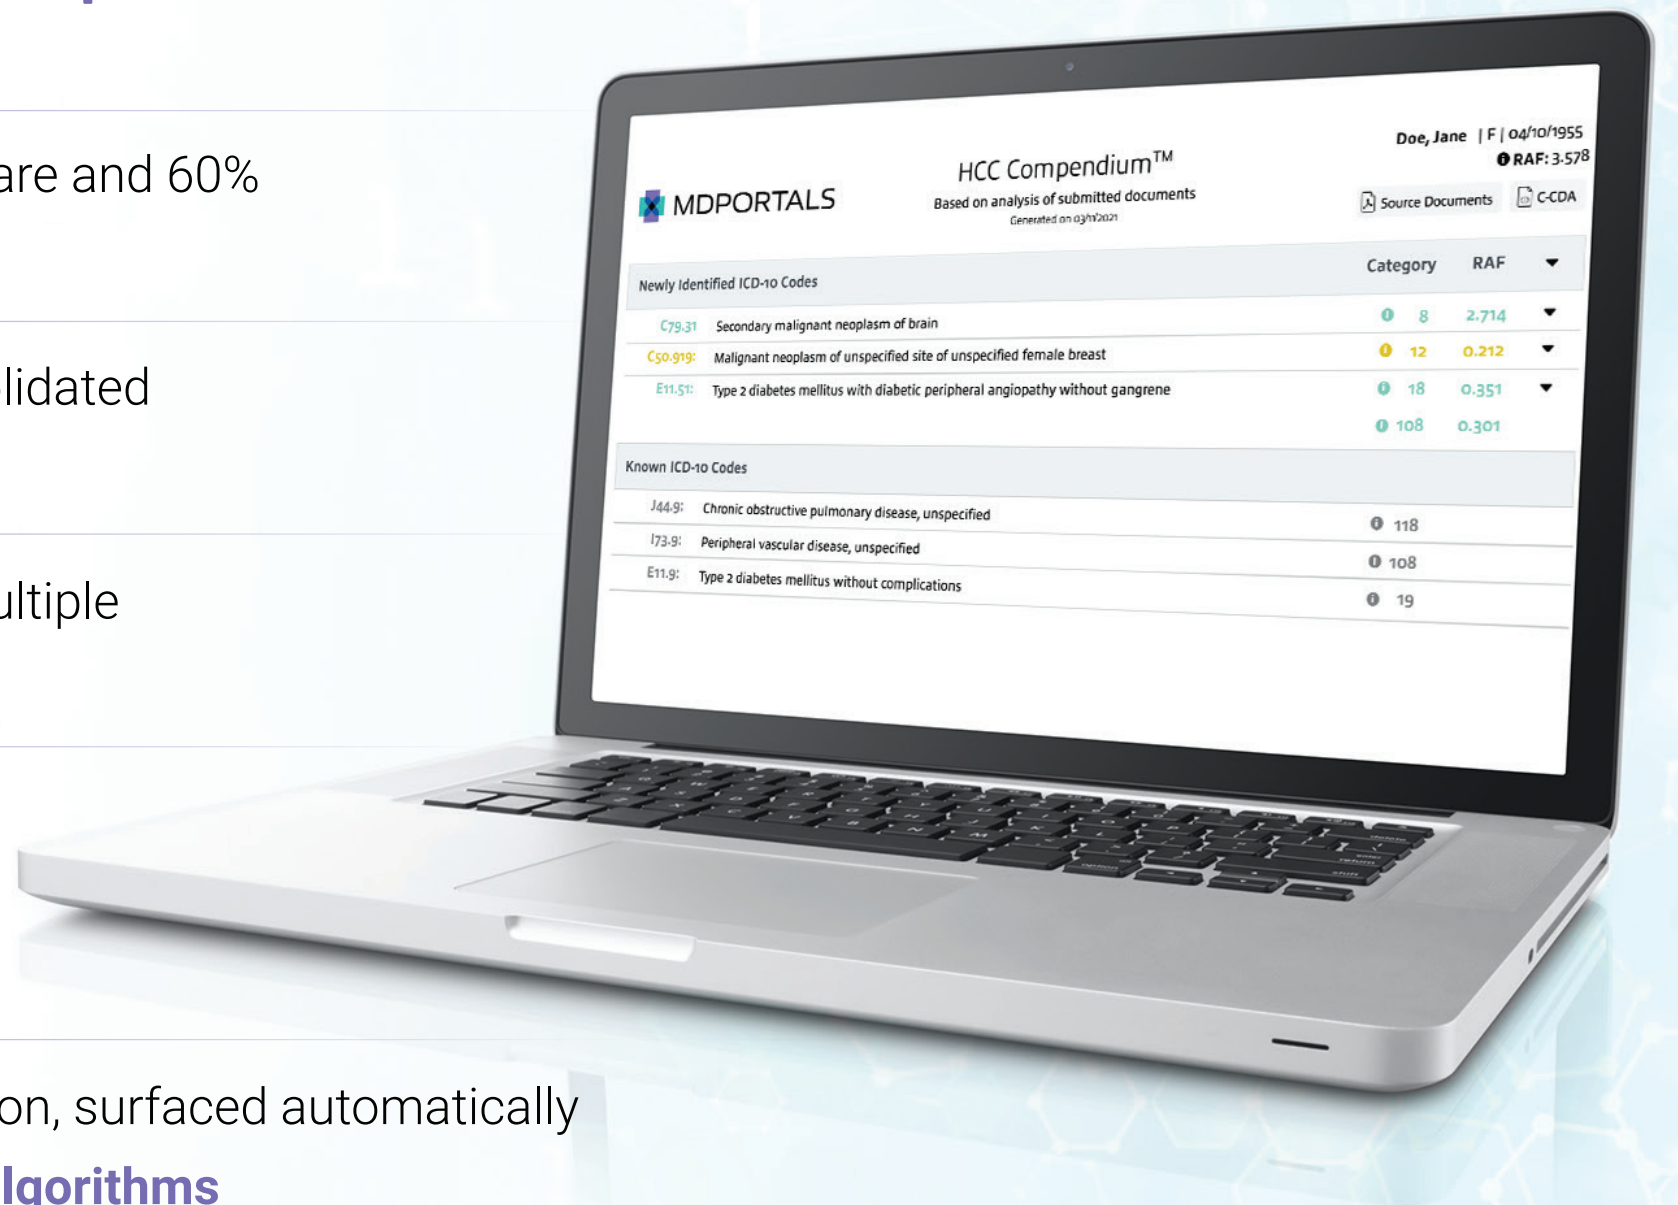

Suggested ICD-10 codes for consideration, surfaced automatically through **proprietary machine learning algorithms**

Speed-to-value with rapid implementation and light IT footprint

One-click access and **seamless integration** into current EHR tools and workflows

How the MDPortals Compendium Helps You:

- + Deliver comprehensive care based on more complete, real-time information
- + Identify missing ICD-10 diagnoses
- + Address social determinants of health
- + Improve outcomes
- + Capture accurate HCC codes automatically
- + Realize an average RAF score uplift of 1.2 points
- + Define and refine your actual risk for appropriate reimbursement
- + Reduce time spent on supporting documentation
- + Integrate multi-sourced data into your own EHR

Contact our team to find out how you can get risk adjustment right and deliver quality care with unified patient records. [Start a conversation today!](#)
