

# Penetration Testing Services Data Sheet

# What is Penetration Testing

Penetration Testing is the process of simulating real-world attacks by using the same techniques as **malicious hackers**. Penetration Testing is one of the most comprehensive ways for organisations to develop an understanding of the level of **cyber security risk** that they carry. Understanding these risks allows organisations to meet industry compliance and **regulatory requirements**. Additionally, penetration testing allows organisations to develop strategies for the management and remediation of **vulnerabilities** to reduce overall risk to their business and sensitive data.

“Siege Cyber provided well written and easy-to-read reports. The remarkable services provided by the Siege Cyber team greatly increased the security posture of our environment.”

Tim Moore, General Manager

---

### Why choose Siege Cyber

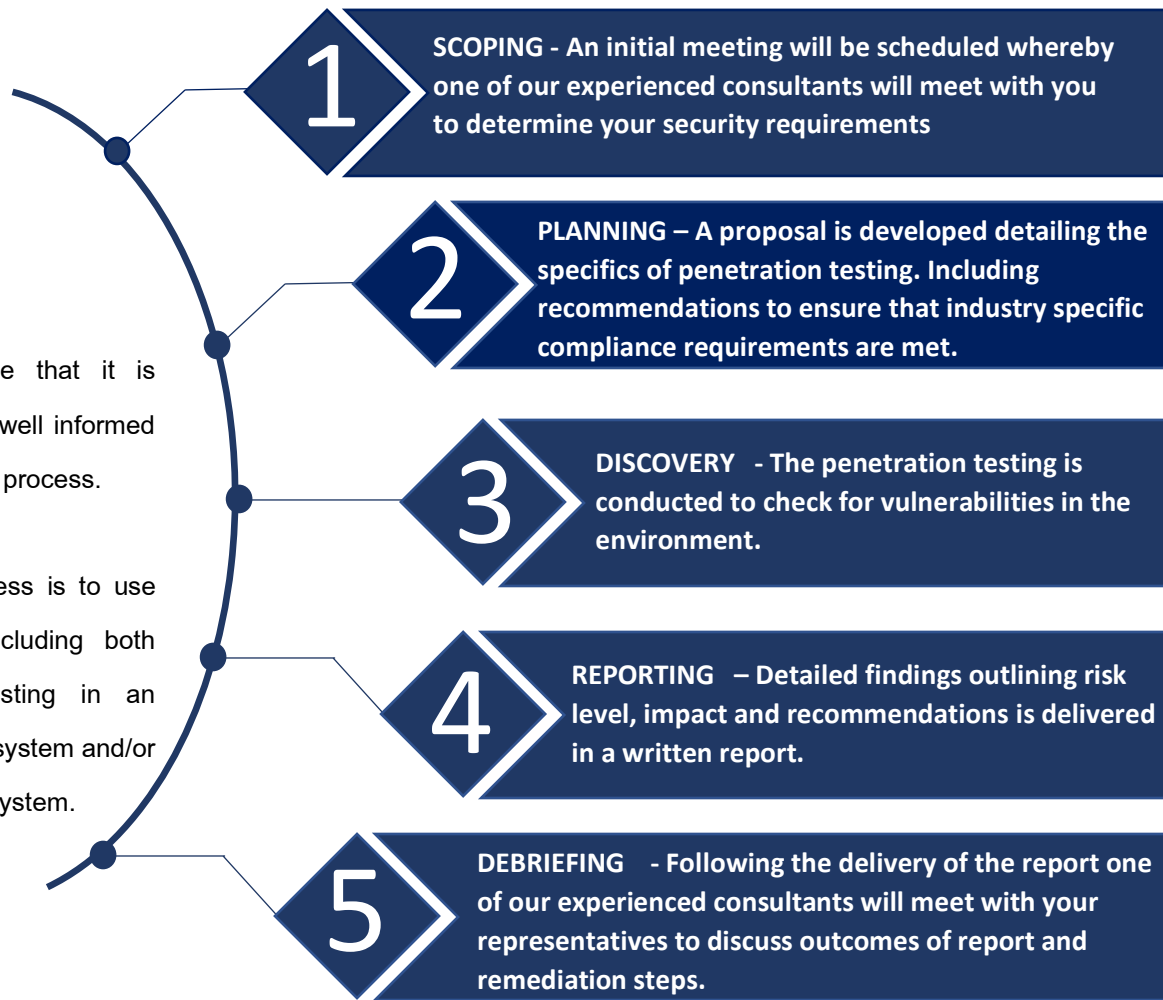

Our team has extensive **Offensive Cyber Security** experience, holding industry recognised certifications and regularly contributing to the penetration testing community.

We understand Australian business requirements and are committed to delivering the highest level of **customer satisfaction**.

## CLIENT ENGAGEMENT PROCESS

At Siege Cyber we believe that it is important to keep our clients well informed during the penetration testing process.

The penetration testing process is to use multiple testing methods including both automated and manual testing in an attempt to gain access to the system and/or sensitive data stored on the system.
