Final deliverables:

.AI (Adobe Illustrator)

Adobe Illustrator is the professional program your logo will be designed in and is the 'source' file. Unlike most other online designers we do not charge to supply this design and give it out as standard. This file is the best file type to give to professional printers and designers. They will be able to reduce and increase the size of the image without any loss of quality. You may not be able to open this file type on your own machine.

.PDF (Portable Document File)

A PDF file allows a document to be displayed no matter what operating system you are using. It includes text, fonts, graphics and other information. This file type can be requested by your printer (print ready PDF may be required)

.EPS (Encapsulated PostScript)

This file type is the most commonly used file by professional printers and embroiderers etc. They will be able to reduce and increase the size of the image without any loss of quality. You may not be able to open this file type on your own machine.

.JPG or .JPEG (Joint Photographic Experts Group)

This is most probably the most well-known, and common image file type. You will be able to open this file type on your computer and can use it for most on-screen needs such as your website, and Microsoft products like Word and PowerPoint. This file type is of reasonable quality.

.GIF (Graphics Interchange Format)

Again, a well-known file type suitable for most on-screen needs. Unlike the .jpg file we supply this file with a transparent background making it ideal to put onto coloured backgrounds, whether for your website or presentations.

.PNG (Portable Network Graphics)

Like the .gif file this is also transparent but better quality (higher res). It is ideal to place on your website if not sitting on a white background and was created to replace the .gif file.
