Wet cleaning for a
brighter tomorrow

Be the high performance cleaning business of tomorrow – today

Imagine, for a moment, if this was your business: You no longer use costly and toxic chemicals in your cleaning process. The range of fabrics you can work on, including delicates, has increased. You still work the same way, only now more efficiently. And most importantly, your energy and water use are both down – so you are now more profitable. This is a picture of how your operation could be.

Interested?

Revolutionary dry-to-dry cleaning process

Process time as fast as solvent

Removes oil stains

A gentle clean that keeps clothes fresher for longer

Silks keep their
shape and colour
beautifully

Extreme in innovation

By using SoftWash®, your operation is going to save money by reducing energy usage, eliminating costly chemicals, and minimising water usage. SoftWash® will enable you to take advantage of new cleaning opportunities, to treat items like leather jackets, house textiles, furniture coverings, and fire-proof garments. So you'll generate new revenue, raise profits and create new ways to increase opportunities.

Reduce energy costs

No costly chemicals or
disposal of hazardous waste

Lower your water use and
eliminate distillation costs

Regular wet cleaning vs. SoftWash®

These two technologies are not the same. With regular wet cleaning the spotting time is longer to remove oil stains, there's an increased risk of shrinkage and wrinkling and you cannot dry the garment completely in the dryer. The finishing time is also longer. By contrast, SoftWash® is a dry-to-dry process that offers you superior oil stain removal, minimal wrinkling, efficient pre-spotting for fat stains, there is no need to hang garments (saving you space) and no additional time involved in carrying out the process when compared with dry cleaning. That's extreme innovation in action.

Open up new cleaning opportunities

Make your business future-fit

Extreme demands on your bottom line call for extreme innovation. You'll see straight away how SoftWash® will change your costs versus output for the better.

Wet cleaning cycles times are typically shorter than other systems – using a separate washer and dryer allows the two cycles to overlap, thereby saving time. Cleaning businesses that have converted to dedicated SoftWash® wet cleaning claim that they have significantly reduced their time at the spotting board.

You can expect much shorter load processing times – up to 24 minutes – and you can load the machine, up to 50% for wool and up to 65% for mixed fibre capacity.

- Innovative dry-to-dry wet cleaning system
- Easy cleaning and low finishing requirement
- Garments restored to their natural beauty, in touch and appearance

There are real savings for your business, with up to

20%-30%

cost reduction

per kilo/2.2lb of textiles cleaned; because of lower water consumption, lower electricity and optimal detergent dosage for the best results (meaning less finishing time) – compared with regular wet cleaning technologies.

SoftWash® is a **fast dry-to-dry wet cleaning solution process**. The whole process – cleaning, drying and finishing – **takes only one hour**.

It's a quick process – and the benefits to your business will be swift too.

Your brighter business

You run a busy operation. You need a solution that will give you better returns. Your switch to SoftWash® wet cleaning may offer you the best return from any investment you'll make.

And you'll be glad to know that it's easy to start using the SoftWash® business. It's simple to set up, installation costs are low, few technical modifications are required, there are no installation restrictions (unlike with solvent machines) and there is very little down time. You can replace your solvent machine with SoftWash® – the complete and unique solution that includes equipment, detergents, training, a web class, marketing materials and more.

Lower your
capital costs by up to

50%

of the cost of traditional
dry cleaning equipment

- Easy installation and simple maintenance

SoftWash®
WET CLEANING

Cares for the
most delicate and
precious garments

Garments
restored to look
and feel like new

More flexible
than dry cleaning.
Better all
around

Improved productivity
through innovation

Removes
tough stains
including oil

Minimal training
requirements

In your busy professional cleaning business you need your cleaning products to be as user-friendly as possible. They need to be able to quickly and effectively remove tough stains like grease, oil, and wax. The SoftWash® process is as fast as, and easier than, more traditional dry cleaning methods – but without the negatives like toxic chemicals. And because of the friendlier detergents and simpler processes you'll be using, your employees will be happier too.

An additional performance metric for garment cleaning is the brightness of colours. It has been noted by cleaners that the SoftWash® process leads to brighter colours and whiter whites. This is due to the absence of recycled solvent, which can cause dull and grey discolouration in the garments being washed.

Simple and flexible

- Wet clean and wash regular laundry using the same equipment
- Wet clean a wide variety of garments
- Clean wool, silk, and other delicates with ease, including viscose, acetate, rayon, angora, cashmere
- Clean Goretex and Sympatex without damaging the membrane or waterproofing
- Clean 70% of leather and suede garments with SoftWash®
- Wet clean fire-proof clothing

Natural and safe cleaning

- No air or water pollution – the process only uses water and biodegradable detergents
- Safe for people – no adverse health affects on either operators or customers
- Safe for all garments: you can clean any garment with SoftWash® that you would traditionally dry clean
- Compliant to any sustainable standards
- Ideal for cleaning special items like children's and baby clothing

Environmentally friendly

There's a lot to be excited about with SoftWash®, the professional cleaning solution that not only enables you to grow your business in a sustainable way but also helps to protect the environment, your employees and yourself. This is because it uses the earth's most natural solvent, water, and uses it sparingly.

**No usage restrictions
compared with Perc**

**No health risk for
customers and operators**

**Non-flammable
detergents**

Innovative equipment to help you work smarter

*'HP' is the Heat Pump Dryer version.

Achieve up to

28

kg/hr

(61.7lb/hr*)

of delicate wet clean laundry

(regular laundry)

46 items/hr

The cleaning cycle time is 24 minutes and the drying is equivalent (depending on items). A 9kg/19.8lb pack can wet clean 18kg/39.7lb an hour or 30 items or can wash 18kg/39.7lb of regular laundry.

The HP Dryer product range is the perfect solution for lowest energy consumption, full flexibility for installation. No air outlets are required, there is no plumbing-in, and the HP Dryer takes up very little space.

A powerful, dedicated range

The SPS10 Washer Extractor

This compact, versatile machine is totally freestanding and is highly recommended for businesses wanting to offer customers the advantage of being able to handle wet cleaning for delicate items such as ties and silk dresses, or just a few items at a time. It's best for small capacity requirements.

The RX Range

Hard-mounted, this washer range is for loads up to 28kg/61.7lb. Ideal for tight budgets and low investment.

The FX Range

This easy to use range of, soft-mounted industrial washers gives you full flexibility with regard to installation and is ideal for bigger daily productivity demands. Load capacity is up to 28kg/61.7lb.

Eco 3 wash technology features include 15% less water consumption, 25% less residual moisture and 20% less energy consumption than a traditional FX laundry washer.

The Dryer Range

For load capacities up to 28kg/61.7lb, these dedicated Dryers have humidity control to ensure the best-possible finish. The Heat Pump (HP) Dryer (range from 9kg/19.8lb to 16kg/35.3lb) version also reduces your electricity costs by up to 60% when compared with traditional dryers.

Up to

60%

savings on electricity

with the Heat Pump

Dryer version

Innovation and performance. Choose your SoftWash® Pack option

	Regular wet cleaning	SoftWash®+
Oil/grease stains pre-spotting requirement	Substantial	Minor depending on spotting agent use
Cleaning limitations (type of garments)	Substantial	Minor
Dry-to-dry capability	No Hang-to-dry	Yes (for 80% of items)
Complexity of work process	High	Moderate
Finishing requirement	Substantial	Substantial to Low
Load factor	Max 1/2	Max 1/2 (up to 2/3 for mixed fibres)
Detergent	Any detergent	Specific detergent

Washing equipment

The Unique Cascade Drum

- Despite the extraction of 400 G of water, the linen does not stick to the drum – which simplifies unloading
- Thanks to the CASCADE concept, there are more perforations in the drum over the same surface – so water extraction is much more efficient
- The inclination of the bulges causes even more water to be extracted – so, the percentage of humidity after extraction is extremely low
- The CASCADE shape of the drum holes provides an extra mechanical action that produces an even better washing result

Soap box mixer

A soap box mixer comes as standard on the FX line. Features include:

- The ability to connect liquid soap pumps to the mixer
- Chemicals are mixed and diluted with water before entering the tub to ensure better protection for fibres

Smartload

- Saves up to 45% on water, energy and detergent costs, which is good news for customers and the environment
- A semi-automated weighing system allows you to enter wash load manually
- Programme automatically adjusts the water level, heating times and liquid detergent
- The display shows exact level of load in percentages

Drying equipment

RADAX® combination of radial and axial airflow

- Up to 30% energy saving using RADAX® airflow
- Increased drying efficiency
- Laundry stays untangled using the reverse drum function

EV04 heat pump drying technology

- Reduced electricity consumption by more than 65%
- In-built condenser requires no external exhaust pipe
- Lower power installation (less than 5kW)
- Shortest drying times on the market
- The largest range of heat pump dryers on the market (9kg/19.8lb, 11kg/24.3lb, 13kg/28.7lb and 16kg/35.3lb)

Some thought starters about Finishing Equipment

The way you finish each job reflects your overall approach to providing a quality service for your customers. Choosing the right equipment can also help you reduce wage costs by achieving the results you need more efficiently. Our experienced team would be happy to recommend the right spotting, ironing, form finishing, topper and press to suit your business needs. We can also put you in touch with preferred partner suppliers if you would find the introduction useful.

Items / day	Spotting	Ironing	Form finishing	Revolving cabinet and shirt form finisher	Topper and automatic press
