REGULAR PRODUCTS ARE NOT EFFICIENT

When we say that the market for nutraceuticals has expanded tremendously, we're not exaggerating: today, an incredible 80% of the global population prefers to use supplements. Nutraceuticals answer our desire for wellbeing.

However, most nutraceuticals only do a limited amount of good. Their ability to deliver key nourishment to the human body is limited by one major underlying cause: low oral absorption.

BIOAVAILABILITY OF REGULAR PRODUCTS IN THE MARKET

CURCUMIN

almost zero

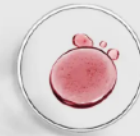

COENZYME Q10

VITAMIN E

10-30%

VITAMIN B12

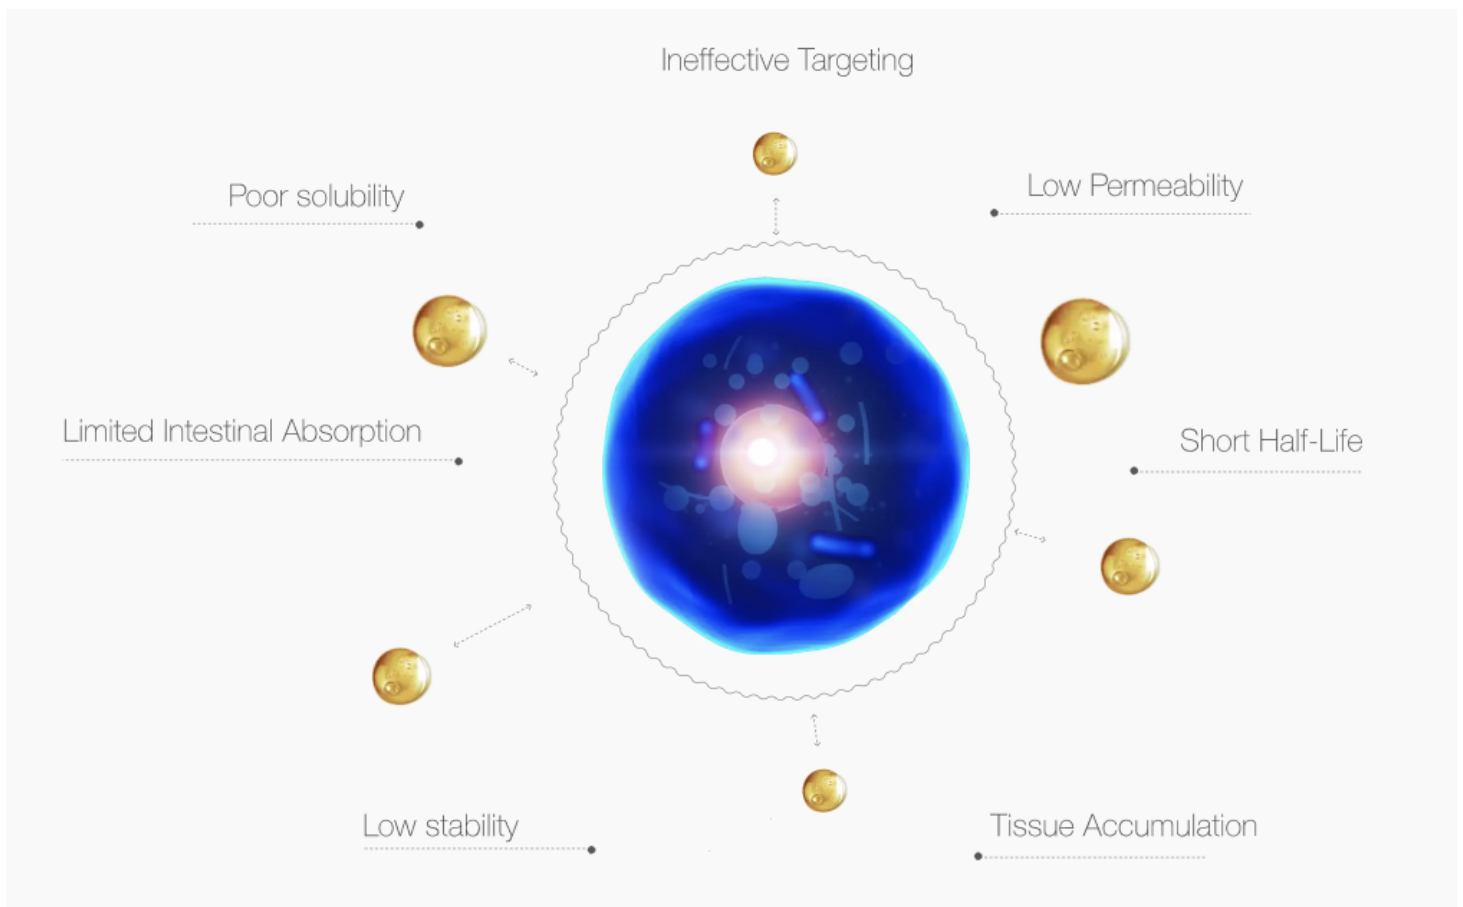

40%

REGULAR NUTRACEUTICALS HAVE DIFFERENT DRAWBACKS AND MANY LIMITATIONS

It's relatively easy to develop a product such as a tablet, powder or capsule that contains food bioactive ingredients. It's much more challenging to achieve a high enough level of bioavailability for those products.

Each food bioactive ingredient comes with its own unique challenges.

Take curcumin, for example: this ingredient has low oral bioavailability thanks to extremely low serum levels, limited tissue distribution, apparent rapid metabolism and short circulation half-life. Coenzyme Q10 is meanwhile challenged by low water solubility and chance permeability due to its large molecular weight.

THE WAY NATURE INTENDED

After 15 years of extensive research, the scientists of MyCell™ Technology have achieved our goal to transform nutraceuticals into pure bioavailability. We are proud to say that we have succeeded in imitating what our body does naturally, and we've done it by taking all-natural ingredients and making them more efficient. We've solved the issues that have long plagued nutraceuticals, including protection, stability, solubility, improved intestinal permeability, cellular targeting and extended half-life.

PROVEN RESULTS

STRONGER AND FASTER DESIRED EFFECTS

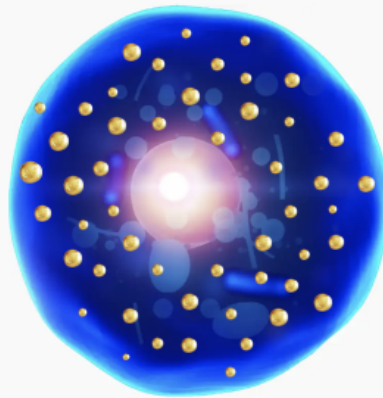

Making fat compounds soluble in water is just one of the benefits of MyCell™ Technology. Our revolutionary method of creating nutraceuticals in a water-soluble form has proven results. Compounds are protected and more stable and the dissolution rate is enhanced. MyCell™ Technology introduces extended circulation, improved intestinal permeability and optimal cellular uptake.

Put together, these improvements boost bioavailability to almost 100%. Our MyCell™ -enhanced ingredients deliver natural products with fast and noticeable desired results.

BRING YOUR BRAND TO A HIGHER LEVEL

IMPROVE THE FORMULATION
OF YOUR PRODUCTS

Six of the 10 best-selling supplements on the market can be substantially improved using our MyCell™ Technology. Countless other supplements that are popular in the nutraceutical, wellness and anti-aging markets can also be made significantly more effective. If you're looking to bring your brand to a higher level, let us show you how our technology can enhance your product

INNOVATE IN ALL ITS FACETS

PERFORMANCE

Stronger and faster results.

CONSUMPTION

A few drops replace multiple and large capsules.

FORMULATION

Innovate by creating your own blend.

PACKAGING

Easy to use and precisely dosed.

UNRELENTING IN OUR DELIVERY OF HIGH QUALITY PRODUCTS

IT'S SIMPLE: MAKE IT BETTER
BY ADDING THE BEST INGREDIENTS.

Today's focus on maintaining a healthy lifestyle is fuelling a demand for all-natural supplements. We answer this by obtaining our ingredients from carefully selected sources around the world. We choose the ideal environmental conditions and meet the highest quality standards.

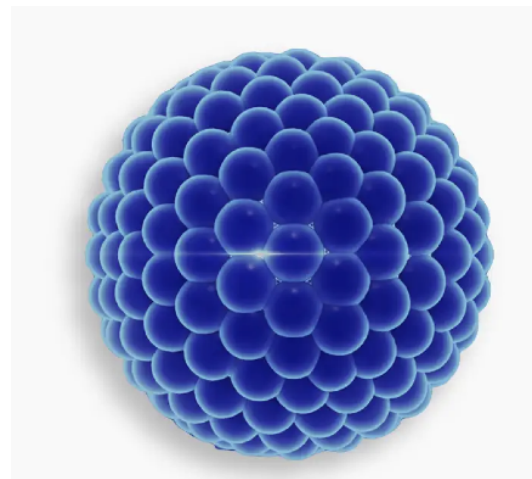

Green Propolis from the rainforest in Brazil. Olibanum from trees of the genus *Boswellia* from India. These are just two examples of the natural ingredients that make our products exclusive.

Food supplements are far from the only possibility. The water solubility and stability in critical environments of MyCell™ enhanced products make them just as suitable for beverages, confectionery, spirits and other food products.

MYCELL™ TECHNOLOGY

CHANGING LIVES. CHANGING INDUSTRIES.

Discover how MyCell™ Technology improves the effectiveness of nutraceutical and is able to boost bioavailability to nearly 100%
