

the rod reaches a bit to far, could you cut that back a litte.
furthermore I actually like the top of the rod better in your design
#29158257 - could you change that back please?

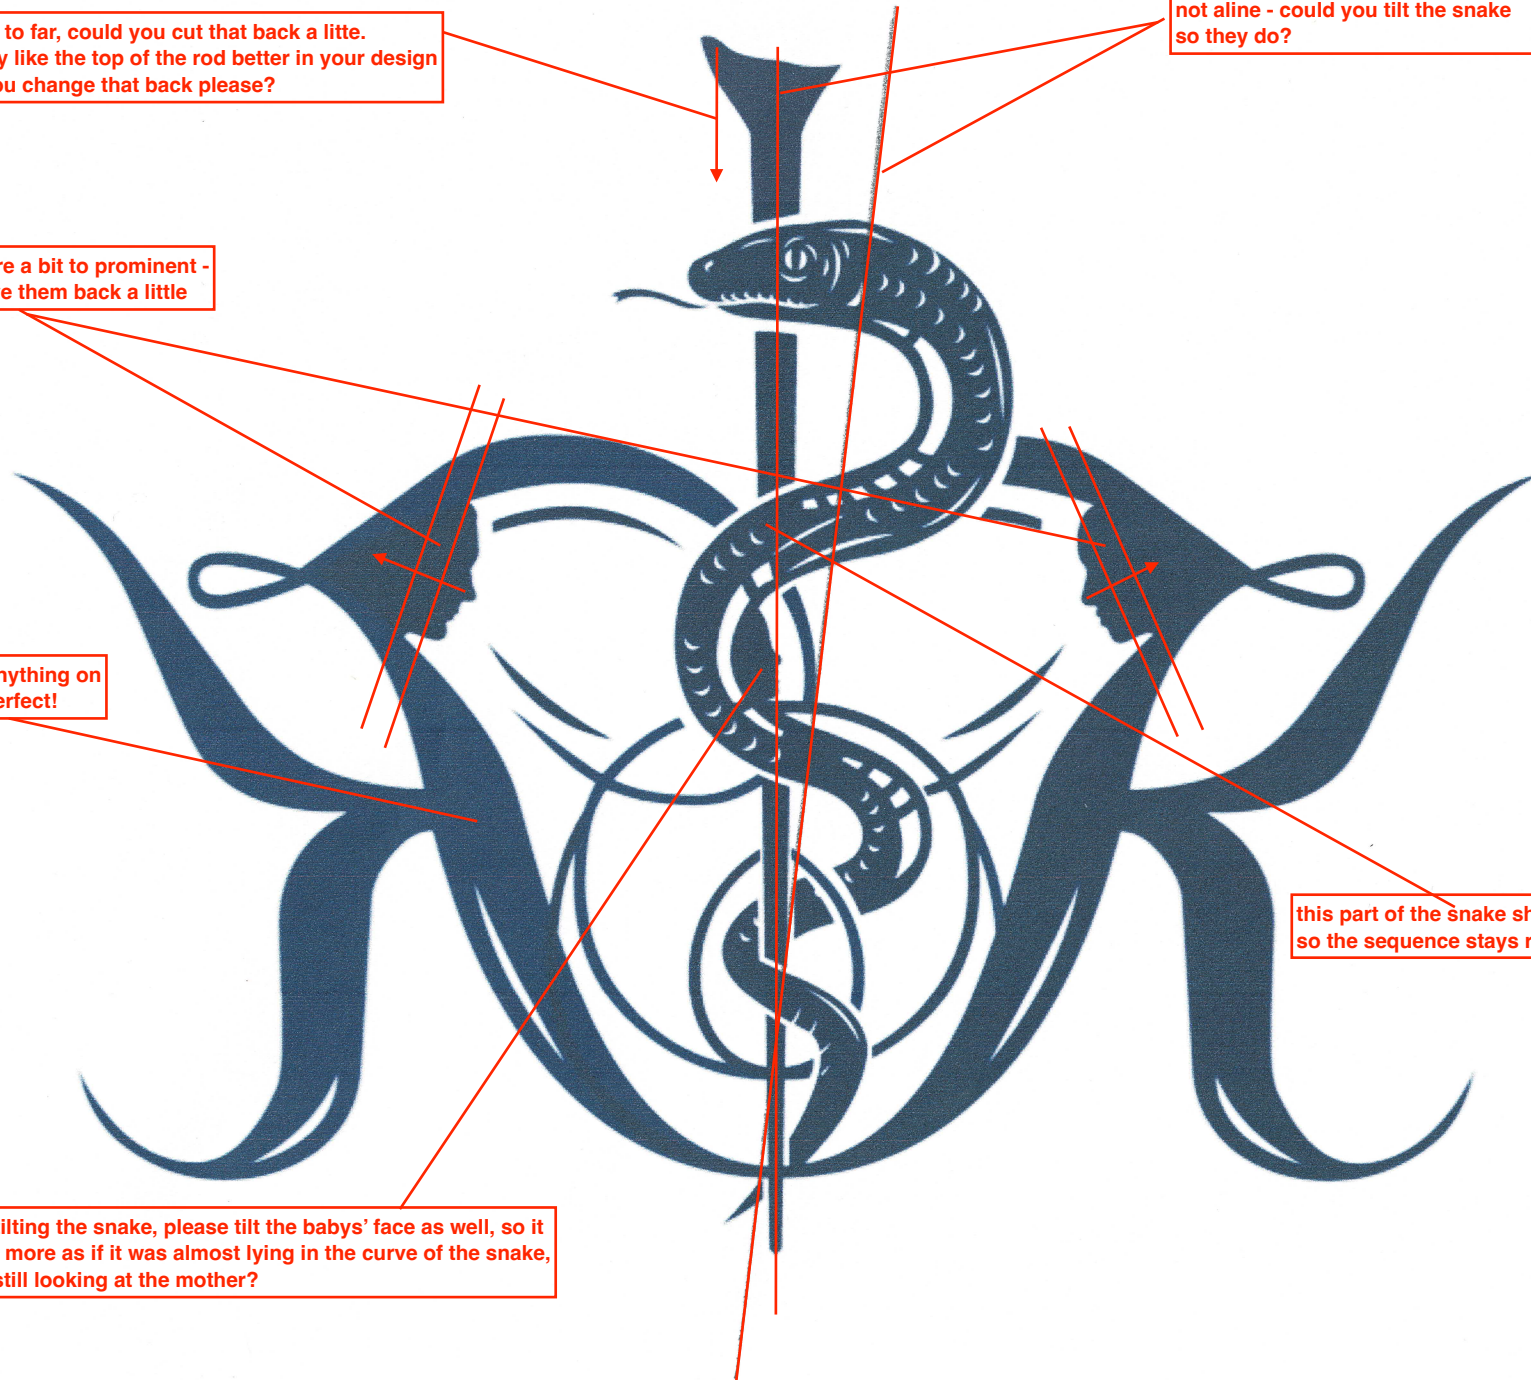

the axis of the snake and the rod do
not aline - could you tilt the snake
so they do?

the faces are a bit to prominent -
please move them back a little

please don't change anything on
the letters - they are perfect!

this part of the snake should go behind the rod,
so the sequence stays right: front/back/front/back...

when tilting the snake, please tilt the babys' face as well, so it
seems more as if it was almost lying in the curve of the snake,
while still looking at the mother?

the final result should look kind
of like this:
finally please move rod with the
snake down a little - like this far:
