

# VentBoards

Introducing the **Ventboard** patient air filtration system. The Ventboard is a source focused HEPA filtration system mounted at the head of the bed for residents who currently have or are suspected of having airborne transmitted illnesses. The **Ventboard** utilizes a patented headboard design that pulls air from the head area of a patient through a HEPA filtration system and exhausts filtered air back into the room which may reduce the transmission of airborne particulates in the direct patient environment. Used in addition to standard infection control protocols the Ventboard system can help reduce the risk of exposure to other residents and staff.
