

Rapid access No-Scalpel Vasectomy

If patients have completed their family and are looking for a reliable and permanent form of contraception, vasectomy may be the right choice for them. It is a minor procedure and avoids long term hormonal treatments in females.

The procedure can be performed under local anaesthetic, or with sedation as well if preferred. Patients can usually return to work the next day.

Nick Brook is a dual fellowship trained urological surgeon who undertakes vasectomies at Ashford Hospital and Glenelg Day Surgery.
