

## Posy's Story

Posy is our well loved 9yr old Boston Terrier. She has always been super active, crazy active! About 6 years ago we noticed some occasional tremors in 1 leg. Our previous vet took an xray that showed some malformed vertebra that was likely pressing on nerves. The trembling was getting worse over time. The recommendation was to limit her activity and medicate with anti inflammatory meds as needed. She stopped running, playing and became a grumpy gal. Most days one or two legs would shake and by evening all 4 legs trembled. Two months ago we meet Dr. Paige and boom 🌟 she is a new pup! She rarely shakes and her behavior is back to sassy and loving. She chases the other dogs again instead of playing yard duty when they run, she jumps right in with the gang! We are so happy with the results of adjustments, laser treatments, and home exercises.
