GREEN EARTH™ ice melter

GREEN EARTH™ contains a blend of naturally occurring granular ice melter and liquid deicer resulting in a high performance ice melter that is safer for use around concrete, asphalt, metal, animals, vegetation and waterways. **GREEN EARTH™** has been created through the application of a high performance proprietary liquid deicer to a granular ice melter that creates a unique product that is effective at much colder temperatures (-25°F / -31°C). **GREEN EARTH™** also performs much faster, and lasts much longer - requiring the use of less product and less applications. Please use at half the rate as any other ice melter. **GREEN EARTH™** is formulated with a **green color.** This color serves as a guide to the amount of product that has been spread. The green color is also non-staining & photo sensitive - disappears when it is exposed to sunlight.

Directions for use:
For best results, remove any existing snow and slush from area prior to applying ice melter. Evenly sprinkle **GREEN EARTH™** on desired surfaces. Apply at a rate of 5lbs / 1000 sq. ft. (approx 1/2lb / sq yd.) Melting should begin immediately. Once snow and ice have sufficiently melted, shovel off remaining slush. Thick accumulations may require additional application.

Precaution:
GREEN EARTH™ will not cause harm to properly mixed (air entrained), poured, finished, and dried concrete. Do not use on concrete less than 1 year old. **GREEN EARTH™** will not chemically attack concrete, however natural freeze/thaw cycles, as well as freeze/thaw cycles caused by deicing material, may cause some damage to poor quality concrete. This product should not be over applied. Excessive amounts may cause surface flaking or scaling and increases the occurrence of freeze/thaw cycles. It is recommended to remove all water and slush resulting from the deicing process as removal will decrease the frequency of freeze/thaw cycles. Vegetation damage is more likely when deicing products are over-applied. Correct application rates should be used when placing the products on the concrete surface.

Contains:
Enhanced solution containing potassium acetate and other proprietary non-hazardous components and corrosion inhibitors.
NaCl ..... CAS. NO. 007647-14-5
K Acetate .....CAS. NO. 127-08-2
