

## Lean Comprehensive - Bundaberg

Identifying and eliminating waste in thousands of businesses across the globe.

Increased productivity, efficiency and staff engagement are outcomes every business should be seeking. How to achieve this however is not always so obvious.

Lean Comprehensive is a world renowned course that addresses these issues and will help you introduce changes to your business that can help you reach these all important goals.

This one day workshop in **Bundaberg on December 4** will demonstrate the benefits of using Lean in product development and in non-manufacturing processes and how the principals can be applied to any business.

There will be an introduction to the Lean Principles, examples of successful applications provided and participants will also take part in a hands-on demonstration which will showcase traditional approaches versus lean solutions, demonstrating the practical application of Lean and the outstanding results. Participants will leave the workshop with a good knowledge of how, where and why to apply Lean tools, for best result.

Places are limited so book early to reserve your seat.

## Lean Comprehensive Success

Successful Lean transformations are dramatic. Our experience shows that up to 95% of process time is waste, with only the remaining 5% offering value. The removal of these non-value adding activities frees up resources for working on processes that do add value for the customer.

one of our success stories:

- Lean helped telecommunication retailer Vita Group improve their service model by 38%
- Jonker Engineering decreased production time and increased productivity by 25%
- Through Lean, Biomerieux reduced process time from 21 to four days increasing efficiency by 80%

Why not join them? Book today and find out how your business can become more productive and efficient today.

### THE FACILITATOR:

#### **James McIntosh - Productivity Lead Consultant, QMI Solutions**

James McIntosh is a skilled consultant, specialising in maximising profit, capacity and unlocking production efficiency.

He is a professional engineer with 13 years of strong skills in production system design, continuous improvement tools and rapid interventions.

He has wide-ranging experience in the Australian automotive industry implementing Lean and other World Class practices across the supply chain including Parts and Accessory, Tier 1 Supply and Vehicle Assembly Plant.
