

# Quality we can prove

It is one thing to machine a part but a whole other thing to verify repeatedly, part after part after part. Our new high precision visual inspection system can check complex critical parts in seconds.

Complex shapes, rigorous expectations, repeatability and verification. We can do it.

The part shown to the left is machined complete on our Citizen L25 Swiss CNC. Inspection of all critical features took longer to verify than to actually machine the part. We now can inspect not just the critical features, but 100% of all external features in a matter of seconds. This improved efficiency

directly benefits our customer, giving them added confidence the parts Envision Tech delivers, is exactly what they order each and every time.
