

We all want to live a long and vibrant life! But it's not the number of years that determines the health and vitality of your body. It is the number of active stem cells your body has!

As we age, the number and strength of our stem cells decline. By age 30, only 40% are active; by age 60, nearly **all activity** has ceased. That is why our skin loses its luster, it takes longer to heal, we gain weight, and ultimately, pain and disease begin to creep in.

UNTIL NOW!
