### SLIDA CURTAIN

### INSTALLTION

### LEAD TIMES

### TECHNICAL DATA

Material Weight	610gsm-900gsm
Tensile Strength	1200N-3500N
Tear Strength	150N-600N
Material Fire Rating Examples	BS7837, M2 (NFP92507) BS7837:1996
Operating Temperature	-25 to +60 Deg C

#### Clear Vision Panel

A clear vision panel can be added to your curtain at NO ADDITIONAL COST.

Our super transparent PVC comes off the roll at 1370mm which we will aim to install above hip level unless specified to give you full visibility through your curtain.

#### Chain Weight

A chain sleeve can be added to your curtain to assist with keeping the curtain grounded in drafty environments. If your curtain is being installed outdoors or in any type of draft environment, a weight is always recommended.

#### Installation Service

If you have a large project or you do not have the resources and equipment to install your partitions, you may benefit from utilising our specialist installation team.

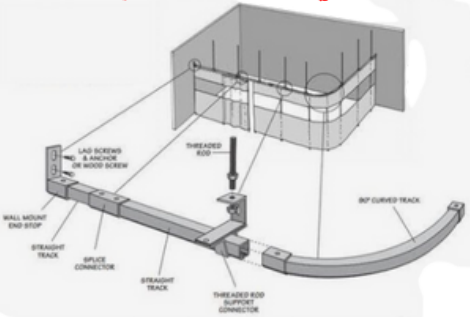

Our qualified installers can work with even the most demanding schedules and complete your installation out of hours for busy factories to reduce downtime.

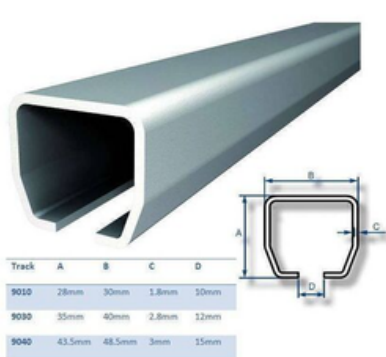

## HOW IT'S INSTALLED INDUSTRIAL SLIDING TRACK

### can anyone redesign this?

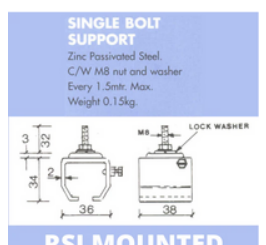

### and this

### HOW IT WORKS

## WHAT WE OFFER

## A photograph of a warehouse interior showing a complex system of metal beams and cables. A red arrow points to a specific vertical cable support structure.

[illegible]

## A man wearing a yellow safety vest and dark shorts is operating a blue Genie GS-1932 scissor lift. He is standing on the platform, leaning forward with his right hand on the side rail. The lift is extended upwards against a solid blue background. The model name "Genie GS-1932" is printed in white on the side of the platform. The lift's scissor mechanism is visible, showing grey and blue components. A yellow and black striped safety bar is at the base of the platform.
