Fast & Secure Data Insights & Analysis

Data Rooms: Oceans of Data expensive to trawl Through

Data rooms are an essential part of M&A and yet for almost everyone involved it can be the most frustrating part of the process. The larger it is, the harder to find the information you want.

It's time to stop hunting around file structures, looking for information that isn't there, sourcing data from different places, getting stuck with versions and wasting too much time failing to get the answers you need to help you maintain momentum.

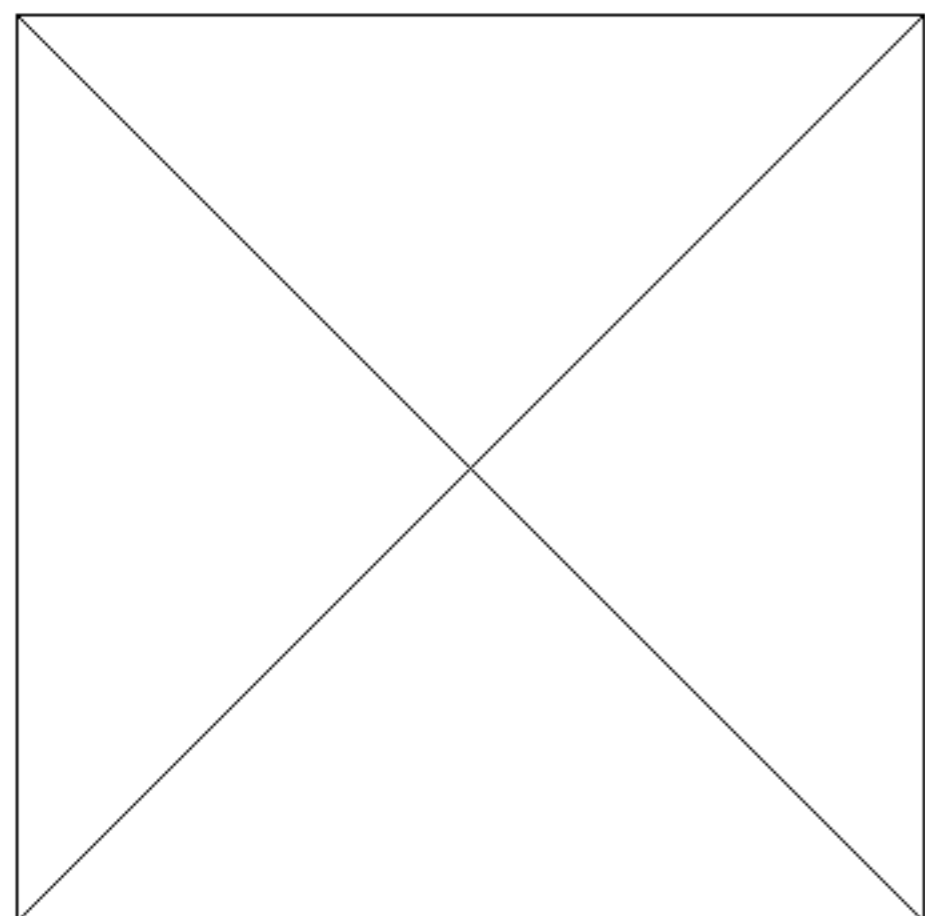

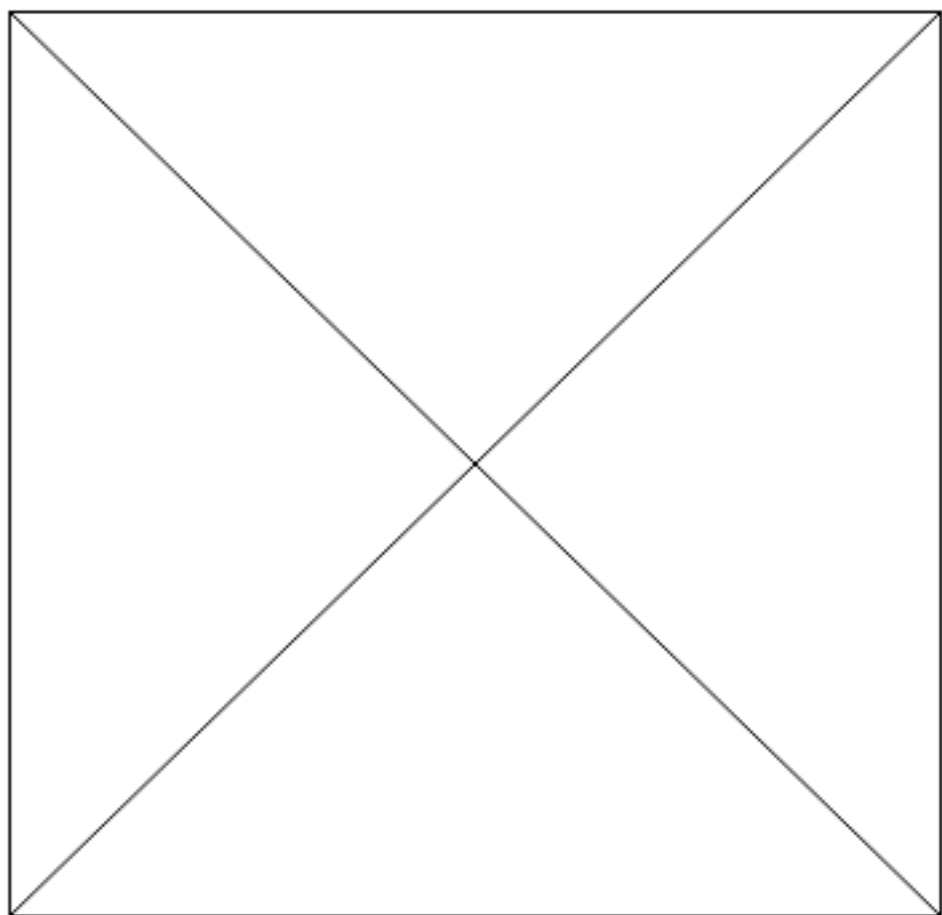

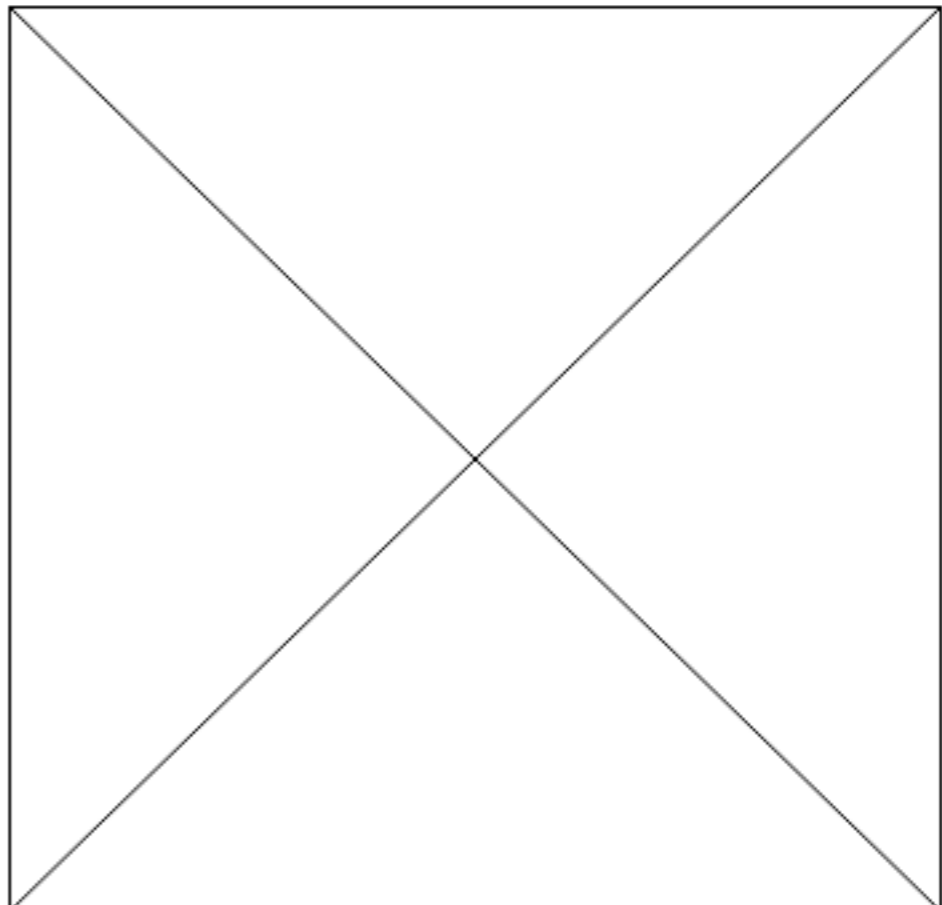

So we came up with Reccy. Private, secure, and fast data room analysis can be yours, book a call to demo the app!

Save Time, Spot Issues & Collaborate

With Reccy, you can **save days of high-ticket time**. Hunting around for the right file through a network of folders is frustrating, or compiling information from multiple sources can take hours. With Reccy you get an immediate detailed insight report which can be refreshed every time you add new documents; and you have a conversational AI that gives detailed answers and references to your specific questions.

The Insight Report also quickly spots any **critical information that is missing** from the Data Room and gives you the information you need for information requests.

And the room, though fully secure, will allow you to **share all this added value with your advisors**, all for one fee. Meaning that you can work collaboratively with Corporate Finance, Accountants, Lawyers and Advisory firms, making the Due Diligence process so much more efficient.

Privacy and Security

Your Reccy room is secure, and encrypted at rest. We do not train our systems on your data or pass to any insecure third-party companies. Only those authorised by you can see your documents.

With Reccy:

- Each room is private and only seen by authorised users
- You have full administration of access to each room
- When deleted, a room is permanently erased

Reccy Eats Data Rooms For Breakfast

We can work with any Data Room, and have yet to see one too large to be consumed. The bigger the room, the better the result as we digest, encrypt and provide an easy to use interface that will answer all your questions and provide you with insights within minutes.

It Works With a Range of Files

Word

PDF

Excel

Image

Use the same bootstrap icon set as we use in the app:
<https://icons.getbootstrap.com/>

Throw your data room files at Reccy, as a Zip file or individually, and it will most business formats such as Word, Excel, PDF, Text, Emails, in most international languages.

You can remove or replace files as the room matures and it will automatically analyse and adapt to the new information. For example, you can tell Reccy not to include a file in its analysis, or only search certain kinds of documents.

Reccy quickly highlights which documents are unreadable, encrypted or password protected. This will allow you to see where you need additional documents or passwords from the seller.

What You Get Out: Reccy's Capabilities

Instant Insights

Within a short time after the upload of your first Data Room, you get a 60-point overview. This covers critical areas commonly explored such as: growth drivers, legal liabilities, IT security and key executives.

As you add to the room, you can refresh insights and they will incorporate any new information.

Conversational AI

Reccy has a conversational AI that only pulls data from the data room in question and therefore avoids leaks and hallucinations.

Answers arrive within seconds and provide detail where possible and file references so you can find where the source information is.

Gap Reporting

The Insights reporting also uses the same 60-point process to help you spot what is missing.

If an answer to a question isn't to your satisfaction, the chances are that you need to request further information. And once you add it, you can refresh the Insight.

Pan-Business Teams

It takes a team to make a deal happen, and with Reccy we have taken that into account. No pricing per seat, or limiting to a company.

If your Reccy needs different advisors accessing it, then we provide it for you. For every room you run, you can have a different set of users to help you ensure full privacy of the entire process.

What is This Worth to You?

- **Save hours** of your and your advisors' time
- **Spot** where you need to chase further information
- **Identify** the key areas to investigate further
- **Collaborate** with your team and accelerate the entire process

You Need Enterprise-Level Privacy & Security

We Cover All Areas of Concern

With a Data Room, it is essential that you have full confidence in the security of the data contained and when it comes to applying AI to the process, there are additional considerations you need to be aware of.

All Files are Encrypted

Every file you upload is analysed immediately. All files are encrypted at rest. At any time you can delete files you don't want, or replace updated ones. You're in charge of what you analyse!

Access Security

Every data room Admin has control over the access to that room. So, even the same organisation can choose who they grant access to. Different lawyers for different transactions? Not a problem. You're in charge.

No AI-Leakage

Have you been using AI to analyse confidential information? A note of caution: the AI can train on your data - meaning your confidential data may be leaked to someone else asking a similar question. We built Reccy with this issue in mind: we do not train on your data, and when you close the room, everything is erased.

Server Security

We strictly limit access to your data. Reccy staff cannot see your documents, and everything is encrypted at rest. Other AI solutions will learn from your data, but we never train Reccy on your data-room. We also do not retain your data and never pass to insecure third-parties.

Hallucination-Free Answers

One issue with modern generative AI is hallucinations. If an AI does not know the answer, it may make up information. In order to combat this issue, we strictly limit AI responses to the documents in your Data Room. We have set strict parameters for AI analysis so that it doesn't bring in external data or information when answering questions, limiting its answers to what it finds in the data you are providing.

How Reccy Works

1
You upload your data room

2
Reccy analyses and categorises your files

3
After Reccy's analysis, you get 60 key insights

4
Reccy answers any question and references the source

Tackling the Challenge of Hallucination in AI

What is AI Hallucination?

There are different kinds of AI but since 2022, the most famous of these are Large Language Models (LLM). These are revolutionary AI models that allow people to ask questions in plain English (other language) and the AI will answer in kind. However, LLMs can sometimes "hallucinate". This means that AI models, may generate information that is incorrect, fabricated, or inconsistent with known facts. Why does this happen?

The Root Causes of AI Hallucination

- **A lot of data:** LLMs are trained on vast amounts of data and relying on this, they can create an answer which seems plausible, but is inaccurate. To combat this, we strictly limit our AI responses only to a specific data room.
- **Training data limitations:** sometimes LLM's are inaccurate because they are trained on incorrect information. For example, an LLM may pick up information from a chat forum that includes opinions that are not verified or correct. We work to exclude such training from our AI responses and Reccy has guard-rails to focus the AI on the context of the data room to help ensure the answers are accurate and relevant.
- **Prompt misinterpretation:** Sometimes we might misunderstand the intent or context of a user's query, leading to irrelevant or incorrect responses: how you ask your questions matters! That's why we have our Insights section - carefully curated categories that allow you to see at a glance an overview of your data room.

How We Tackle AI Hallucination

At Reccy, we have tackled the problem of hallucination head-on. We strictly limit our AI responses only to your specific data room and the data within and Reccy does not add additional information. For example, if I have a data room about a company that serves burgers, Reccy will not include its own knowledge about that business to any answers. Reccy is focused the AI on the context of the data room to help ensure the answers are accurate and relevant. Here's why:

- **Defined knowledge base:** By limiting Reccy to a specific set of documents, we constrain Reccy to a well-defined set of objectives. So means Reccy doesn't draw on unrelated or inaccurate training data.
- **Increased relevance:** Reccy generates responses based on pertinent information, relevant to your data room, reducing the need to "fill in gaps" with potentially incorrect data.
- **Reduced complexity:** even if you have a large data-room it will still be tiny compared to a typical AI set of knowledge. This means fewer contradictions from overly generalized knowledge.

Reccy can still get it wrong! For example, some documents in the data room may be contradictory or inaccurate. Also it may misunderstand a question it is asked. That's why Reccy's Insights section is so powerful: it sorts information from the data room into carefully curated categories so you to see at a glance an overview of your data room.

Privacy and Security

Every Reccy room offers complete security, to give you 100% confidence that the information will not leak out.

With Reccy:

- All files are fully encrypted
- The AI is private and does not leak any information externally
- You have full administration of user access to every room
- When a room is deleted, it is completely removed and destroyed
