

HADE

Water Hygiene / Water treatment/ Specialist water plant

4x

Who are we

Hade has been founded by two seasoned directors with a combined experience of nearly four decades in the industry. Our two Directors have united their wealth of knowledge and expertise from both being Directors at previous Water hygiene/treatment companies .

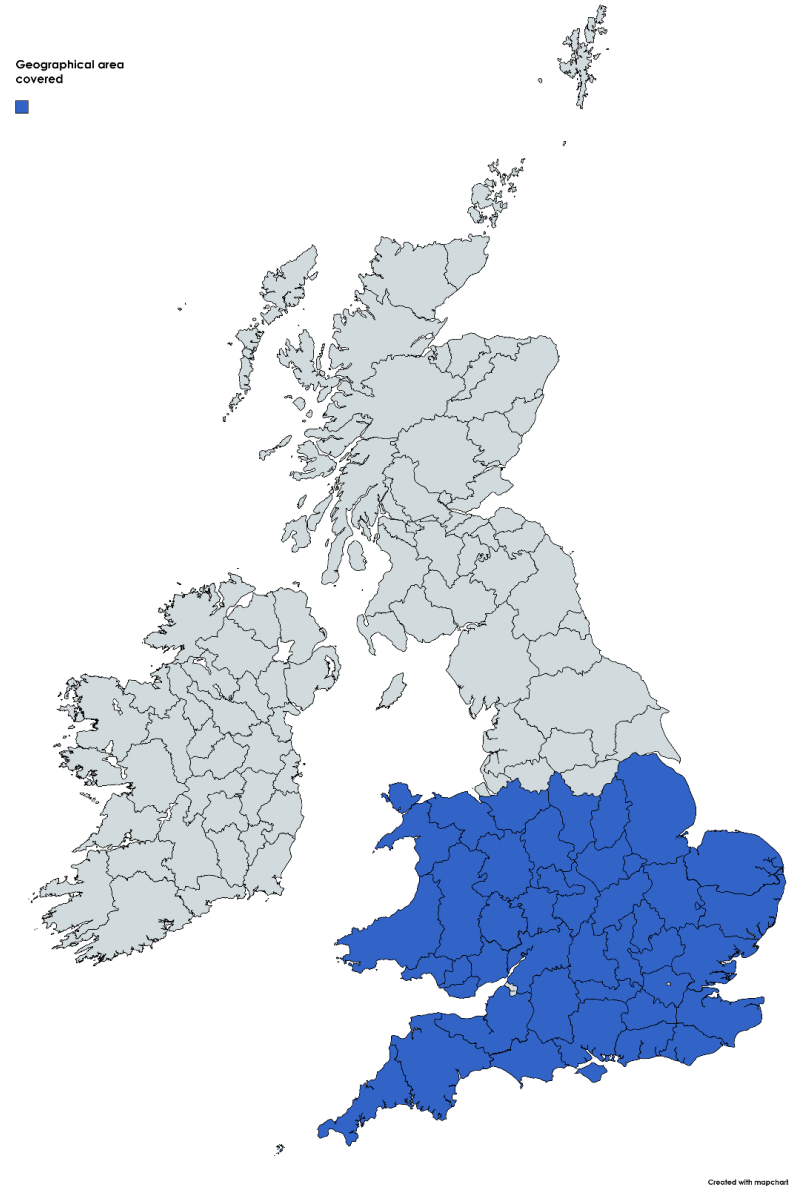

With a shared vision and a commitment to addressing the pressing need for enhanced technical know-how, Hade is set to become a driving force in supporting industries with unparalleled solutions. The founders recognized a crucial gap in the market, where businesses were grappling with a deficiency in technical expertise and support. This realization prompted them to combine forces and establish a company that not only fills this void but sets new standards for excellence.

The Directors have a proven track record of success in steering their previous companies towards innovation and success. Their strategic leadership and deep understanding of the intricacies of the industry have played a pivotal role in their careers.

- Commercial Plumbing

For full details see separate slide

Services

Legionella risk assessments

In the UK, legionella risk assessments are mandated by the Health and Safety at Work Act 1974 and the Control of Substances Hazardous to Health (COSHH) Regulations to prevent Legionnaires' disease outbreaks. These assessments are essential for identifying and managing potential Legionella bacteria risks in water systems of buildings. By evaluating contamination likelihood, implementing control measures, and ensuring ongoing maintenance, these assessments protect public health, emphasizing proactive water safety management as a priority.

Services
