

# CMMC Readiness Assessment

All vendors who aspire to work within the supply chain of the U.S. Department of Defense (DoD) are required to comply with the Cybersecurity Maturity Model Certification (CMMC). **Deadlines are approaching rapidly.**

## Why does CMMC Certification Matter?

The Cybersecurity Maturity Model Certification (CMMC) is designed to support businesses protect sensitive data from intellectual property theft. With cybersecurity being a key priority for the U.S. Department of Defense (DoD), CMMC Certification is a mandatory requirement starting 2024 for all vendors who aspire to bid on contracts and work within the supply chain of the DoD. The various levels of the CMMC assure the DoD that the processes and practices followed by the vendor ensure the safety of Controlled Unclassified Information (CUI) and Federal Contract Information (FCI) and the flow of that information.

## 3 step process ...

Gap Analysis – Implement solutions to meet requirements – Get certified

## How to get started...

Call EDM Automation to discuss options at 757-505-5600. Don't hesitate as there will be a rush to certification as enforcement nears and many will be left without resources.
