IV THERAPY

IV Therapy is the fastest way to deliver nutrients throughout the body, because it bypasses the digestive system and goes directly into the organs, resulting in a 90-100% absorption rate

Frequently asked questions

What is Drip IV Therapy?

IV Therapy delivers nutrients and hydration directly into the bloodstream for immediate absorption and use by the body.

How Long Do IV Fluids stay in the body?

When you get an IV treatment, the fluids will typically stay in your body for a few days after the treatment ends. There are a number of factors that contribute to how long the fluids and, subsequently, the effects of the IV remain in your system.

Why is IV therapy Beneficial?

You will feel instantly rejuvenated as the vitamins and minerals are infused directly into your bloodstream giving you the valuable nutrients you need.

Client Reviews

I'm always looking for ways to boost my energy and increase my overall health. I've been hearing that IV drips can be great for that, so I just had to try it! It was such an easy process with no pain.

Sarah Kate
Treatment: Iron Infusion

More about Iron Infusion

It is a treatment where iron is given through a vein and directly enters the bloodstream. Iron Infusions help patients effectively restore normal iron levels.
