

**Tagline:**

Automate your bid-tracking and spend less time in your inbox

**Sub Headline**

BidMarker is a Canadian Microsoft-based solution that supports construction Subcontractors and Suppliers.

**Is BidMarker Right For You?**

Are you a Canadian Construction Subcontractor or Supplier?

Do you get dozens (if not hundreds) of emails every day regarding upcoming job opportunities?

Are you managing your bid-tracking through spreadsheets or within your email inbox?

If you answered yes, then BidMarker could be a valuable asset to your estimation team!

BidMarker is built to help estimators redirect their efforts from endless inbox searching, and manual data entry into 1) easily prioritizing job opportunities, 2) and providing competitive proposals within a collaborative team environment and 3) automatically gathering valuable insights about your job opportunities and the companies that are providing them.

**How Does It Work?**

Our solution saves you countless hours by automatically recognizing bid invites from your inbox and automatically extracting the relevant information into a neatly managed workspace. This allows you to manage all your incoming opportunities in one place. From here, you can:

- 1) Conveniently view all your incoming job opportunities, on a calendar, on a map and in a conventional list view
- 2) Collaborate with your team by delegating tasks and projects to the appropriate team members
- 3) Automatically uncover insights from your ongoing activities, based on the results of your bid proposals and easily recognize the highest value sources of work over the months and years of estimating work

**What Our Clients Say**

This section requires a place for a picture, name, position @ company, along with a testimonial and 5 star rating system. Perhaps a carousel design that automatically loops through the list of testimonials. We don't currently have real data for testimonials, but will need this section as a part of the design.

## **Our Story**

BidMarker is the second construction software solution created by OasisCode, a Canadian software company focused on innovating within the industry. With a decade of experience in the construction tech industry, and hundreds of satisfied Canadian customers, OasisCode is proud to support our community through both of our solutions: BidMarker and Swiftender.

## **Our Approach**

### **Simple**

Our solution is easy to use for non-technical construction estimators, and our software is a turn-key solution that starts working with minimal setup

### **Specialized**

Our software is built for a very targeted group of Canadian subcontractors who are estimating ICI projects on a regular basis. Allowing us to provide the precise solution to your specific challenges.

### **Well-Supported**

The technology is directly supported by the managing partners. It's becoming more rare with each passing year to have technology that is backed by real, local experts. No outsourced tech support!
