COASTAL
Recycled Building Materials

Diverting landfill for a **greener** future

Sustainability

Coastal Recycled Building Materials works in conjunction with Combined Demolition Services to proactively recycle building materials from demolition sites. Part of the demolition process is identifying recycleable materials and reusing them in a sustainable way, thus helping to reduce landfill and helping the environment. Our recycling yard also offers an opportunity for other companies to reduce landfill and tip activity.

We are passionate about timber and have the machinery and expertise to repurpose lumber for future use. With the lack of new hardwood supply available we are able to offer a product that not only looks good, but also will last a very long time. Our products are used by Architects, Landscapers and the general public alike.

Our Products

Raw Timber

One of our most affordable products is raw timber that is straight from demolition sites and has not been dressed or treated.

Machined & Dressed Timber

We have the equipment to be able to de-nail and thickness timber for use in many areas including: Feature Wall Panelling, Screening, Shelving, Slats and Furniture.

Firewood & Timber Sleepers

We re-purpose unfit timber for firewood and sell timber sleepers ideal for gardening, retaining and landscaping.

Second Hand Building Materials

We recycle and re-purpose old materials such as tiles, bathtubs, metal, windows, doors and many other items to further reduce waste.

Our Process

Our team carefully dismantles houses, building, factories and industrial sites and sorts materials along the way. We salvage all available materials for recycling and re-purposing and for resale.

Our Team

Our passionate crew are experienced in non-destructive demolition ensuring all useable materials are salvaged.

We then ensure everything is sorted and reused or recycled for future use. We have the capability and the machinery to repurpose timber, metal and concrete products minimising landfill and waste for an environmental sound solution.
