Fraud Management

With Veriphyd identity verification, you can expand your reach while keeping the bad guys out.

Technology built for customers & businesses to easily transact with trust

Verifying & Validating

Verifying and validating an individual's identity includes authenticity of documents such as passports, driver's licenses, government issued identification.

Biometric Identity Proofing

Biometric Identity Proofing relies on unique physical or behavioral characteristics such as fingerprints, facial recognition, or iris scans.

Two-Factor Authentication (2FA)

Two-Factor Authentication (2FA) requires individuals to provide something they have (one-time code sent to mobile device) with something they know like a password or pin or with Multi-Factor Authentication (MFA) a fingerprint or physical token.

In-Person Identity Proofing

In-Person identity proofing requires a person to physically present themselves.

Knowledge-Based Authentication

Knowledge-Based authentication involves individuals specific answers to questions that only they would know such as social security numbers, previous addresses, or details about financial history.
