#### General notes

Imagery should invoke high tech, safety, security and include healthcare themes. the circuit board shield is our logo and a ghosted image as back ground or some animation that brings in the logo or the circuit board should be incorporated.

GeriTech is a systems integration company specializing in low voltage solutions for healthcare facilities and senior living communities. The company aims to leverage its industry expertise, and innovative products to become the market leader in systems integration, focusing on enhancing safety and operational efficiency.

Vision and Mission: GeriTech's vision is to revolutionize integrated systems within healthcare and commercial environments by delivering innovative, reliable, and tailored solutions that enhance operational efficiency and patient care. The company is committed to setting new standards for resident safety and customer satisfaction.

Company Summary: Founded by experienced industry professionals, GeriTech specializes in the design, installation, and maintenance of systems including Access Control, Nurse Call, Delayed Egress, network infrastructure, and overhead paging primarily for healthcare clients.

Products and Services: The company offers a comprehensive range of low voltage systems including Nurse Call (wired and wireless), Wander Management, Access Control, and wired/wireless network infrastructure tailored for senior living and healthcare facilities.

## Mission Statement

GeriTech was founded to fill a specific need. Senior living communities and healthcare facilities of all kinds face unique challenges in regards to technology and systems integration. GeriTech is perfectly positioned with an experienced management team, skilled technicians, industry relationships with suppliers and facility management groups. We have built our reputation on excellent customer service and the highest standards of integrity. GeriTech's vision is to revolutionize integrated systems within healthcare and commercial environments by delivering innovative, reliable, and tailored solutions that enhance operational efficiency and patient care. We are committed to setting new standards for resident safety and customer satisfaction in every project we undertake.

### Dave Czapiga – President

A 20 year veteran of the telecommunications industry, Dave brings the technical and business acumen to lead GeriTech to success. Having been responsible for large complex projects and large teams spread over vast geography Dave has a proven record of building exceptional teams. For the preceding 5 years, Dave has been responsible for a business providing the same products and services as GeriTech.

### Jennifer Rice – Vice President of Customer Success

With over 20 years of experience leading the service department of a systems integrator, Jenn brings her relationships and an in-depth knowledge of client systems and challenges.

## Products and/or Services

GeriTech offers a comprehensive range of products and services to senior living communities. A full service resource providing design, installation, sales, and maintenance to our clients. We strive to be the single source for all low-voltage systems within these communities.

**Nurse Call:** These systems sometimes referred to as a “Call Bell” system, allow a resident or patient to call for help from their bed or other fixed location. High end systems allow direct communication from the patient to caregivers, reducing risk and

improving patient outcomes.

**Wireless Nurse Call / Pendant Systems:** These wireless systems consist of a network repeaters throughout a facility to permit a resident wearing a device to call for help and for the system to locate them and provide that location to caregivers.

**Wander Management:** These systems include receivers, a door controller, and transmitters secured to a resident. When the resident wearing a transmitter approaches the door. The door is locked preventing the resident from eloping. If the door is open and the resident wearing the transmitter enters the antenna reception field, an alarm is sounded to alert staff.

**Access Control:** Used in facilities of all types, these systems allow facility operators to control who enters a space, when they can enter and log these events to allow reports to be generated in the event of an incident.

**Wired and Wireless Infrastructure:** In our connected world, facility operators rely on network cable, switches, wireless access points for nearly every task of the day and with technology ever improving there is a constant need to install and upgrade these systems.

**Overhead Paging:** Facilities of all types require systems to efficiently make announcements to parts or all of their property. Typically intergraded with business phone or nurse call systems, our expertise integrates these systems providing an effortless end user experience.
