

Attributes:

- 2 part interlocking components
- Lightweight
- Customisable (in terms of height)
- Simplistic and robust
- Reusable
- Tree protection
- Galvanised coating

Benefits:

- Easy to handle and install due to being lightweight and its components interlock.
- Simplicity of the design and its lightweight nature allows for anyone to install them or for the whole family to get involved.
- Two part top brace allows for easy dismantle once plant/tree no longer needs the tree guard.
- Unlike other single use tree guards this one will stay with you for life allowing for you to reuse it.
- Uninterrupted growth allowing for the tree to mature quicker defending against other animals which would otherwise trample them.

TG001 – Tree Guards

This robust two-part design allows you to protect newly planted saplings from grazing livestock or browsing wildlife. Once the tree or plant has matured and no longer needs the tree guard, simply dismantle with no harm or damage to the tree, allowing you to reuse your tree guard for your next plant.

Unlike other tree protectors, this one will stay with you for life. Coming with a hot-dip galvanised coating, this tree guard is protected from wear and corrosion ensuring it remains looking brand new for longer.

The lightweight interlocking design is user-friendly, meaning anyone can install these tree guards making it a great activity for the whole family to get involved.

Features include:

- Hot-dip galvanised coating
- Reusable
- Simple installation
- Height can be adjusted to suit
- Two-part interlocking components
