

HERE'S HOW THE MEDICAL ALARM SYSTEM WORKS

1. Push the Button

When help is needed, push the waterproof emergency button. A signal is sent to the main unit and on to our Monitoring Center.

3. Help is on the Way

We will notify emergency services, family and friends in whichever order is needed. A care specialist will stay on the line with you until help arrives.

2. Speak to a Care Specialist

You'll hear the reassuring voice of our professionally trained staff 24 hours a day and if you are unable to speak don't worry we'll still get you the help that you need.
