

TrackOne Studio

Custom Software Development

TrackOne Studio designs, develops, and maintains innovative custom software solutions for schools which facilitate school processes and improve efficiency.

Our experienced design and development team will carefully analyse your requirements and then design, develop and implement a cost effective and sophisticated software solution which is tailored specifically to your needs and budget.

CUSTOM SOFTWARE DEVELOPMENT

Unlike off-the-shelf software packages, custom software is designed, developed and implemented specifically to meet the unique requirements of your organisation. It is tailored to seamlessly integrate with your existing systems and processes and is designed with the functionality you need without the extras you don't.

Custom Software Development is cost effective and offers many advantages over traditional off-the-shelf software packages.

EFFICIENT, FLEXIBLE, COST EFFECTIVE

The processes and systems that keep your school running are unique to your environment. Many of these processes are carried out manually because off-the-shelf packages are not flexible enough to meet your specific requirements. A custom software solution is developed exclusively for your school and integrates with your existing policies, processes and systems.

Custom software is designed to integrate with your existing IT systems. Rather than adding another stand alone solution custom software development allows you to bring together the data stored in various systems and databases.

The school environment is constantly changing and evolving. Custom software is flexible and can be modified to mirror changes to processes and systems and expanded to include new features.

The development of custom software is collaborative. Our developers will meet with your team, analyse your requirements, develop a specification document for your review and adjust the final solution as required. This collaborative approach and attention to detail typically leads to improvements in productivity and cost reductions.

ABOUT TRACKONE STUDIO

TrackOne Studio has extensive experience in a range of industries and is able to use this knowledge to create innovative and sophisticated software solutions which are tailored to meet the exacting needs of our clients.

We strive to create a creative and collaborative environment where open communication, thoughtful planning and attention to detail leads to the development of quality software solutions which exceed expectations and increase productivity.

MICROSOFT SHAREPOINT

If your school is utilising the Microsoft SharePoint platform then TrackOne Studio can help you to maximise your investment by designing and developing sophisticated Web Apps to meet the specific needs of your organisation.

TrackOne Studio has a wealth of experience developing software for the Microsoft SharePoint Platform and has worked with many schools to develop custom SharePoint Web Apps. Each TrackOne Studio Web App is designed to tightly integrate with your existing databases allowing greater functionality and a wealth of information to be drawn from varying sources and displayed to the end user.
