

Is your income going DOWN?

Are You...

Dealing with more stress, but making less money?

Worried that new regulations will erode your professional fees?

Concerned about affording a good education for your kids?

Dealing with too many infections - due to the hospital environment?

Murphy Healthcare Group has been a leader and innovator in building and rehabilitating outpatient surgery centers since 1990.

Phil Rubinfeld, MD:

"The employees and the nurses love working here, again, we have group of great doctors that were organized by the Murphy Healthcare Group. We all enjoy working with each other, and the nurses and the employees feed off that."

Joan O'Shea, MD:

"We have a zero percent infection rate for spinal surgery and those include lumbar laminectomy, lumbar discectomy, anterior cervical artificial disc replacements, anterior cervical discectomy and fusions, up to three levels. The patients typically go home the same day; they are happy with the staff. The staff provides almost one to one care, which (the patients) are unable to receive in a hospital, even if they are in the intensive care unit."

John Murphy, MD:

"Murphy Healthcare was instrumental on syndicating the other physicians, making our surgery center much more efficient and providing much more diverse surgery possibilities."

Vikki Christopher, R.N. (ASC Administrator):

"You need someone to go with the business aspects of it that the doctors really don't have the time to get involved with, because when they're here their main concern is taking care of their patient and doing their procedures."

Management.

Our seasoned management team at Murphy Healthcare has earned its stellar reputation for success in managing ambulatory surgery centers (ASC). Our management procedures consistently yield substantial rewards, with clients seeing profit increases of 30 to 40 percent or more.

Development.

We'll help organize and syndicate physician partners to form your company. We'll do the research and draft the feasibility and analysis report for your ASC. We'll develop plans for financing, and draft architectural and engineering plans for new constructions or renovation of an existing facility.

Turnaround.

We work closely with physician partners to conduct a full audit of your under-performing ambulatory surgery center. We determine your cost per minute and identify areas where we can decrease that rate by cutting waste and streamlining systems.
