

We need to create mobile media UI 800x480 in size

We are designing our own media app ui for in car apps like carplay (<http://www.apple.com/ios/carplay/?cid=wwa-us-kwg-features-com>) or android auto (<http://www.androidcentral.com/android-auto>)

I am providing the exact specs as well as the layout. Please keep in mind that the layout and sizes much follow ours. All we are looking for is the creativity in design. We would like the design look sleek - simple yet sophisticated and elegant, with the modern spice in it.

Please be sure to follow exact layout and the massurments for each area
