

We at DataBig.io © TM

Belief that all information needed to boost and improve your products and services revenue by more then 50% is out there waiting for you to mine.

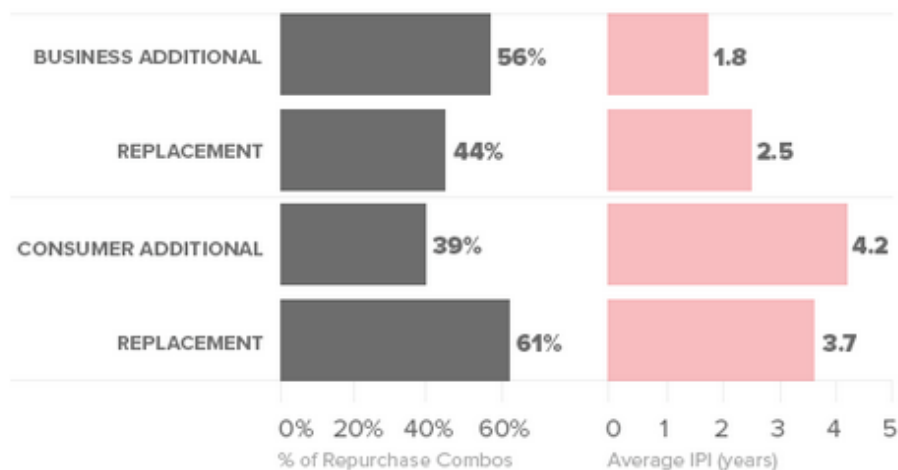

Predictive analytics is a process that creates a statistical model of future and past behavior in real time. It's an area of data mining concerned with forecasting probabilities and market trends. Our predictive analytics services can be used for a variety of applications, from product suggestions to customer acquisition and retention.

We are experts in connecting your business to the global online markets and optimize your products and services performance in a way never has been done before.

We compare in real time over millions of products and analyze the best ways to place these products and services in a way your competitor can't dream of yet.

We use big data analytics and cutting edge cloud service technology in data visualization to give you access to the best what big data has to offer.

The revolution in how to sell your products and services based on big data analytics has begun now. - Be part of it now! [Click here to sign up](#)

Sticky ©™

Catch your customers where they are and track them around the globe.

Product tracking via Google, Social Media Tracking, e-commerce matrix combines with active product and service placements with the Google Digital Display Network and doubleclick studio redefined.

Detailed analytics about your products and services at your finger tips in real time. Place and manage your adds in any digital network.

Tracking via all digital campaigns e.g. YouTube and Vimeo, Web pages, Facebook Google plus and mobile apps.

Big Data in real time compares to over 14 countries price indexes and the global market. Direct backend connection to retailer's like Wallmat, Metro and many more whole sellers.

We search all these databases for you and make your marketing life easy.

From the western world price compare engines, over the private markets like eBay and the commercial players like Amazon to other continents markets like Asia and Africa via smart connectors and translators. We connect literally hundreds of big data providers worldwide and mine their data to place your product perfect. You know exactly where your product could work at which price and how to advertise for it.

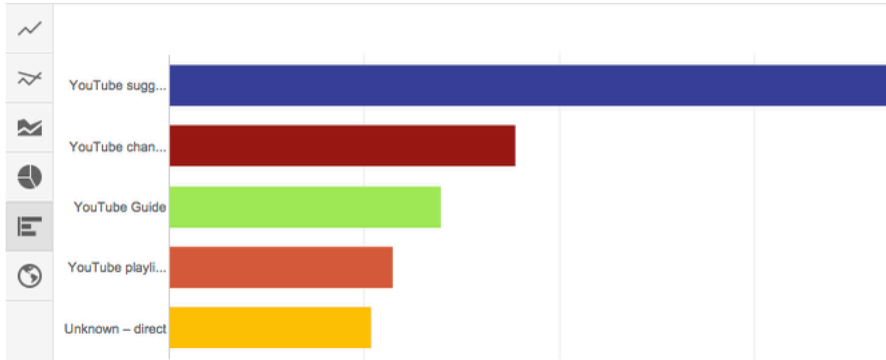

We suggest you even the most workable end consumer price and give you the right digital media campaign and sales strategy.

Hook us up to your bank and accounting software and we can do even more to help you to optimize your production costs and warehouse.

Extend from digital in the analog world with our local shop and warehouse module.

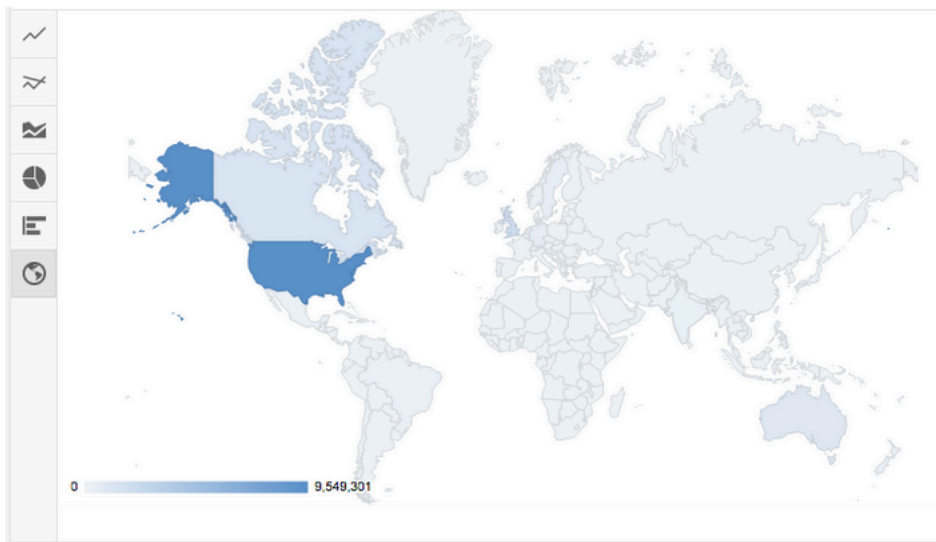

Bar chart

With the bar chart you can display the selected data in horizontal bars which represent their values in proportional lengths. This chart type behaves similarly to the Pie chart and defaults back to the Line graph in case the date dimension is selected.

Interactive map

The interactive maps show where your video is being viewed. Darker areas on the map mean that more people are watching your video in that location. You can also hover your mouse over countries on the map to see detailed data for that country.

If you want a quick snapshot of your channel analytics on mobile, review them in the [YouTube Creator Studio app](#):

BOMB © TM

Drop the sales BOMB on your customers today. BOMB takes care of that your customer has no other choice then buy your product or service as soon as possible. We place the right adds on the right media at the right time wherever your customer is. We know the devices he using and the digital platform he is on. BOMB is active customer add-tracking (attacking) via digital advertising. We not only know what your customers want but also when they are ready to buy and make the purchase process as easy as possible for them while guarantee the best price and quality. Aggressive multichannel marketing guarantees not only the customer the lowest price and best quality but also offers you the best possible product margin.

Know when the time is ripe for a sales.

A screenshot of the Amazon product page for the book 'Big Data: A Revolution That Will Transform How We Live, Work, and Think' by Viktor Mayer-Schönberger and Kenneth Cukier. The page shows the book cover, a 'Look inside' button, and a star rating of 4.5 from 336 customer reviews. The book is available in multiple formats: Kindle (\$0.00), Hardcover (\$4.92), Paperback (\$9.20), and Audible (\$20.95 or 1 credit). The paperback format is highlighted. Below the format options, it mentions the book is a 'Financial Times Business Book of the Year Finalist' and includes a quote from the New York Times: 'Illuminating and very timely... a fascinating — and sometimes alarming — survey of big data's growing effect on just about everything: business, government, science and medicine, privacy, and even on the way we think.'

Pricing and investor information

Lets assume we get 500.000 interested customers in the first quarter. At \$19.99 offering such a risk free and save option a not to high aimed target in a global market we belief. We are sure you can do the math.

Our target market is to work with or even bypass the classic digital agency business and make the complex world of advertising, product placement and pricing so easy that even your mum can do it from home. Your mum is a successful businesswoman? Even better imagine what she can do with our simple tools! All you need is a good product or service and a vague idea where this could work.

At \$ 19.99 / Month

We offer a hard to beat price.

Compared to the cheapest digital campaigns which start at \$6.000 our as do it yourself designed service and automated cloud system offers a not to beat deal.

The idea behind came from the need to make the complex world of digital advertising and tracking easier. Way easier then the google display network made it already. Web and Facebook analytics, YouTube stats are a nice start, but where it gets truly awesome is when we help to place your products and services at these channels and then do not stop there but compare and exchange tips and tricks with others million of products and services.

At least every customer has to pay once \$19.99 no matter if they stay or jump off. In the first month we help the customer set up with our intelligent wizards to define their products better, add digital channels and find the target markets. In other words we set up their basic advertising campaigns.

Is your web page ready?

Is your advertising state of the art?

Is your price in your competitive market the best possible?

Are your sales channels ready?

Is your direct marketing working?

What are the other markets for your products/services you did not think of yet?

In the following month we track and monitor these markets and basically collect big data about similar and your product.

After 4-6 month we are ready for the BOMB, which will increase your sales by at least 50% if not more.

If you are not convinced yet or impatient you can quit any time. (30 days notice apply). But note even without the BOMB we beat all existing sales tools e.g. sales force and other CRM systems not only in price but in return of investment.

Terms and conditions

We start BOMB and our comparative big data service when we reach 100.000 users worldwide (signed up paying customers). The engine needs that critical data until it is ready to offer BOMB ©TM and Compare ME ©TM

You can meanwhile work with the service and work on your products and services but will not receive full benefits of the analytics until we reach our target user goal. Modules like BOMB ©TM and Compare Me ©TM can only work with a critical mass of users / Data.

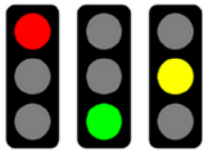

How ever until you receive the full BOMB advantages no additional fees need to be paid. The monthly payments will hold until we reached the critical mass and only continue when you receive our full benefits.

So no risk involved carrying on and costs are always under control.

The maximum loss you can make is the initial setup fee in the first month of \$ 19.99

The more of your services you connect with us e.g. you bank link, accounting software, social media channels, web analytics the more our big data analytics model is able to assist you in selling your products and or optimizing their performance.

You can see your progress in simple traffic light notification e.g. how much big data integration you have reached and what the next steps are to get up and running.

Our detailed sales funnel will coach you how to setup products on YouTube Vimeo, Amazon, Facebook e-commerce and or your own e-shops.

You can sign up right now and you can track how many other users have already registered. Once we reach the critical mass the bang goes big and BOMB will be available.

You can quit any time within 30 days notice.

More user sign up more accurate get the anonymous data collection and more benefits you and the others get from our big data service.

Ever wanted to know when a customer wants your product or service before the customer knows it? It is possible now thanks to big data.
Welcome to the new age.

Dirk Oberste-Berghaus the CEO of DataBig.IO
