

Mold Contamination: It can take as little as 48 hours for mold to grow and multiply. Mold can lead to odors, health disorders and structural damage. Moisture in floors, walls, ceilings and other areas provide a food source for mold. A rapid response is essential to eliminate this unpleasant and potentially hazardous substance from your property.

Sewage Extraction: A broken drain pipe is one of the most common ways a sewage spill occurs. Drain pipes are easily forgotten so years can go by without any maintenance. Sewage spills can go un-noticed until an unpleasant odor is noticed or an inspection is done. Still sewage water is a breeding ground for several harmful pathogens. Untreated sewage can cause illness and even be life-threatening. Prompt removal and proper cleaning is essential.

Water Damage: Several factors can cause or contribute to water damage such as floods, leaking plumbing and a leaking roof. Water damage can cause mold, discoloration, odors and more. Quick cleanup is essential. Failure to remove water damaged materials from your home can lead to health issues and additional property damages or losses. A rapid response and thorough clean-up are a must.

## Why **CHOOSE** Us?

- ✓ 100% satisfaction
- ✓ On-time service support
- ✓ Experienced technicians
- ✓ Professionalism

**SOUTHWEST HOME SERVICES**
