## Clinic Information System

### 1 Comprehensive, End-to-End Clinic Workflow Management

A revolutionary solution with end to end features for simplifying clinic management.

Access to the right information and the automation of complex tasks and workflow is the key focus of CIS, enabling staff to spend more time on caring for patients.

### 2 Access Anywhere, Any Time from Any Devices

Clinical data is stored in a centralized database on cloud allowing you to access the data whether in the office, an exam room, or at home

Use any laptops, desktop PCs, smart phones and tablets to access the system

Runs on all standard web browsers, no need to install any software

### 3 Flexibility to Meet Different Needs and Priorities of Clinics

Prefer to scribble instead of typing on computers? No need for online booking? You can only select the functions you want to use and run the clinic operation in hybrid

Enable to gradually adopt to systemization of the clinic operation by adding functions whenever required and ready in the future.

### 4 Affordable Costs, Easy to Start and Operate

Starting from \$9.90 per month for a clinic site, no limits to the number of doctors

Offers free trial period for the first three months

Our call center personnel will help you with the initial set up and answer to your questions during use.

### 5 Standards and Regulations Compliant

Comply to global medical standards such as HL7, ICD10 and Snomed, allowing you to share clinical data across other hospitals and clinics and interface with other surrounding systems such as PAC system

### 6 Cloud Based

No need to purchase server hardware

Internet connection is sufficient to run the clinic operations

A simple wifi connection is all what is needed

Fully backed up infrastructure - no worry if any disaster strikes -

A revolutionary solution with end to end features for simplifying clinic management

# CIS

## Clinic Information System

CIS is broken up into 6 Core modules and multiple sub modules. The system is designed with the Patient as the central focus.

This is to ensure the system assists the users to provide the best in health care practice providing quick information, at all times.

### Patient Management

Covers appointment scheduling and patient registration.

### Clinic Practice

Essential doctor and nurse sub modules which include obtaining the patient's Vitals, Summary of the Encounter, etc.

### Procedure Services

Related to doctor laboratory requests.

### Cashier and Billing

Essential cashiering sub module which includes Charges Entry, Billing and Payment.

### Inventory Management

Includes Stock Management and handles transactions of drugs.

### Patient's Summary

Primary patient medical information handling such as Patient Demographics, Allergies, Medical Issues, Trend of Patient's Vitals, etc.
