FOLDING DUMMY:

A common first step in planning a print job, a folding dummy is a preliminary mock-up of a final printed piece that is created by folding paper and numbering pages to approximate the finished piece. The folding dummy provides valuable information about page placement that you can use to create a plan, or sketch, of how pages are placed on the sheet.

This calendar was printed with a Fiery server and a digital color copier/printer.

PRINTER'S MARKS :

Printer's marks are special markings that appear on the printed sheet outside the main content area of the job. The location of a "fold" is defined by a dotted line called a fold mark; similarly, the location of a "cut" is defined by a solid line called a trim mark. The job tag which appears in the upper left hand corner of the page may include the job name, time and date printed, and printed sheet number.

This calendar was printed with a Fiery server and a digital color copier/printer.

SADDLE STITCH:

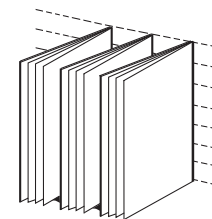

Saddle stitch is a binding style where all the finished pages in the document are stapled or stitched across a common center fold, or spine. Saddle stitch binding is very cost-efficient, but is more suitable for small booklets than for large jobs. Fiery Impose reorders imposed pages automatically according to your choice of binding method, which can save significant time and effort.

This calendar was printed with a Fiery server and a digital color copier/printer.

27	28	29	30			

PERFECT BIND :

Perfect is a binding style where finished pages are folded and stacked one on top of another. Instead of being sewn or stitched as with saddle binding, the pages are held together with a flexible adhesive. This method is ideal for very large books; the phone book is a good example. Fiery Impose reorders imposed pages automatically according to your choice of binding method, which can save significant time and effort.

This calendar was printed with a Fiery server and a digital color copier/printer.

NESTED SADDLE :

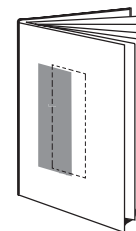

Nested saddle is a binding style that combines both saddle and perfect binding methods together. As with saddle stitch, pages are grouped together and stapled or stitched across a common center fold. The saddle groups are then stacked one on top of another and glued as with perfect binding. Fiery Impose reorders imposed pages automatically according to your choice of binding method, which can save significant time and effort.

This calendar was printed with a Fiery server and a digital color copier/printer.

CREEP:

As sheets are folded to create separate page areas, each fold causes a very small incremental shift in the location of the edge of each page relative to the others (shingling), as well as the content areas imaged on those pages. The apparent shift of content area caused by folding a sheet multiple times is known as creep or binder's creep. The effect of creep is that the content area of pages closer to the innermost fold in a saddle appear to move towards the outer margins of the page. Fiery Impose automatically compensates for creep when you change any aspect of the imposed job.

This calendar was printed with a Fiery server and a digital color copier/printer.

STEP-AND-REPEAT :

Step-and-Repeat is a printing technique where an image is repeated in each page area, or step, on an entire sheet. After printing, the sheet is then cut apart to produce individual images. Fiery Impose provides step-and-repeat printing functionality.

This calendar was printed with a Fiery server and a digital color copier/printer.

GANG UP:

Gang printing, or gang up, involves grouping individual art or images together on a sheet rather than arranging each on a separate sheet. This allows for several jobs to be printed on one single sheet, and that sheet can then be printed as many times as required. Fiery Impose provides gang printing functionality.

This calendar was printed with a Fiery server and a digital color copier/printer.

TRI-FOLD :

A typical tri-fold layout, commonly used for brochures and pamphlets, consists of a standard letter page folded in three sections. Although the three sections tend to be the same width, the space between each section varies so that the leftmost panel can be folded over the other two panels. The folded, finished size fits easily into a standard #10 mailing envelope. Tri-fold brochures are just one of the imposition options enabled by Fiery Impose.

This calendar was printed with a Fiery server and a digital color copier/printer.

2-UP BOOK AND CALENDAR:

A typical 2-up layout can consist of pages across, as in a standard bound book, or pages down, as in this calendar example. When pages down are printed, some pages must be rotated 180° so that they will have the correct orientation when the calendar is read. Fiery Impose allows any page in the layout to be rotated in 90° increments.

This calendar was printed with a Fiery server and a digital color copier/printer.

Z-FOLD VS. GATEFOLD:

When three or more panels are supported in a layout, one of two common folding methods is usually employed. The Z-fold allows many panels to be folded on top of one another without stressing the folded spine. A good example of a Z-fold is most folded maps. The gatefold is usually used in the case of a 4-panel brochure, allowing the finished brochure to expand to double and then four times the original size. Fiery Impose supports both folding standards.

This calendar was printed with a Fiery server and a digital color copier/printer.

4-UP HEAD-TO-HEAD:

The 4-up head-to-head layout is used to create booklets from a layout of 4 pages on each side of the printed sheet. By rotating the two topmost pages, the signature can be folded both horizontally and vertically, and trimmed. The finished book will have all pages in the correct order and rotation. Fiery Impose supports 4-up head-to-head as one of the standard imposition templates, and arranges pages accordingly.

This calendar was printed with a Fiery server and a digital color copier/printer.

This calendar was created using multiple integrated features on the Fiery Server enabling a single touch point workflow. Hot Folders was used to manage the workflow from import to output. Hot Folder Filters was engaged to process the JPEG images into a 13 page PDF file (12 months plus cover picture), sizing and centering each image on a page. Fiery Image Enhancement was activated to correct the images as necessary. The resulting PDF was then merged with a calendar template using Enhanced FreeForm to place the images on the designated pages. The output of the FreeForm merge was then imposed into a top binding booklet to create the final calendar.
