Calcium Magnesium Acetate

Product Information

Calcium Magnesium Acetate (CMA) is made of dolomitic lime and ascetic acid. It is the only ice melter that is biodegradable, non toxic, environmentally safe and pet friendly. It is mainly used on areas that need special protection from the environment i.e. vegetation, metal, groundwater, specialized concrete and is often used in airports, bridges and tunnels. It is highly recommended for general pedestrian surfaces as well. CMA Pure is also blended into various ice melters as a way to make it a "greener" product.

Usage

Use 5-10 oz of CMA Pure on every square yard of frequently traveled surfaces. The amount will depend on weather conditions. CMA Pure is commonly mixed with sand to provide traction. If weather conditions go into the single digits Fahrenheit, a slight mixture of calcium chloride may be recommended to lower its melting point. CMA Pure is most effective as a pre-treatment to prevent ice from forming in the first place. Avoid over usage.

Active Ingredients

Hydrated CMA and other acetates

Calcium Magnesium Acetate CAS # 76123-46-1
