

#### Feedback:

Thank you for your submission. We discussed your design with our team and like it. Please do go ahead and create the remaining icons. We would like to please ask for the following small adjustments:

1. Use the color scheme above (or something like it) since the current scheme has a bit too much of a lego/children's toy look. We include some of that color scheme in the examples above.
2. Since the W icons are hard to distinguish at the final 32x32 size, we decided to delete icons 9, 13 and 14 and group the functionality in one icon (8), which should only show a W (without the star and stick)
3. The map icon (15) is a bit too complex when you decrease the size. Please simplify it, e.g. like something in icon 15 with round edges.
4. When icons 12 and 16 (scatterplots) are made smaller, you cannot identify the points and axes, only the diagonal lines. Please increase the size of the dots (can be just 2-3, same size) and the width of the axes. Icon 17 is good for the 3D scatterplot. Let's delete icon 18 and add one more icon like icon 12 with 2-3 points of different sizes for the bubble chart.
5. The map movie (5) is hard to identify in smaller size. May be just update the original icon, which looked like a movie tool without the map (like your 5 without the map and the upper-left rectangle but with a longer strip at the top).
