

Anti-Spatter Spray

An all-purpose 'guard' against welding *spatter* adhering to metal during the welding process. It can also be applied to the nozzle of MIG welders to prevent unwanted *spatter* sticking to the nozzle. The spray will not cause problems with later adhesion of paints or other surface finishes when applied to the metal. As with all paint surface preparation, a light solvent wipe down before applying metal primer is recommended.

Instructions

Surfaces to be treated should be clear of oil and surface rust. Hold can about 250mm from the surface and spray liberally. Avoid allowing overspray to contaminate other surfaces.

Special propellant used to minimize overspray when in use.

Why not try Chemlube

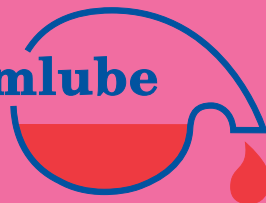

- MIG Paste
- Instant Degreaser

Other Chemlube Products

- Silicone Lubricants
- PTFE Moly and Graphite Lubricants
- Mould Release Agents
- Speciality Solvents
