

## Theatre - Experience the movies at HOME.

Better than the movies - Serious quality sound. Impressive Images - all in the comfort of your own home.

Like their owners, no home theatre is exactly like another. Be sure to check our pics for some of the different rooms - both indoor and outdoor we have worked on. ( [link to pics](#))

The design process starts with a discussion about your goals for the theatre - how you want the room to look, capable of and what you want us to do to make it special.

When designing your home cinema we use a range of excellent products from reputable suppliers. Some of the brands we use on a regular basis are Integra, Paradigm, B&W, Panasonic, Oppo, and SONOS We can work with existing equipment or design the perfect system from the ground up with each component carefully selected to complement the rest of the system.

Come in and discuss the options available to create your own home cinema. With a large range of products to complement your tastes, from outdoor cinema with waterproof speakers to the luxury setup, or basic home theatre system, we can design and create an amazing home theatre experience for any budget.

## Automation

A well designed Home Automation system integrates all the separate systems in your home to one easy to use and understand interface. "Making complex things simple" is our mantra.

Controlling your home with intelligence - lights will turn on when you get home from work, turn off when there is no one in the room, Air Conditioning will run only as required and in the most efficient method, shutters close when it starts to rain. Walk into your home cinema, press "Movie", the projector turns on and the AV receiver warms up to the right input, as the movie begins the lights in the room dim before going out. Set a Holiday mode when on vacation and your home maintains its "someone at home" appearance with lights and music activating automatically - all the while you can see exactly what is going on via your phone on your cameras anywhere in the world.

## Smart Wiring

Smart Wiring delivers and distributes the internet (data), phone, video, audio and TV signals using data and TV cabling from a centrally located hub.

TVs on a wall are very common these days - but what about the Blu Ray player, Foxtel and other equipment - Smart Wiring enables us to hide all this away in another room so all you see is

The cabling is preferably installed during construction or renovation, at the same time as your electrical wiring. Smart Wiring systems may also be retrofitted into your existing home, however there may be constraints on the location of socket outlets and access for cable runs.

The central hub is home to the devices that enable the delivery and distribution of your Internet connection & home computer network, TV signals from your Digital Antenna or Pay TV (cable or satellite), landline or VoIP (Voice over IP) telephone lines, and much more. An ideal location for the central enclosure is somewhere with internal access only (from inside your premises, for increased

security) such as your garage or linen closet. It is important to plan in which rooms you would like to access data, phone, video, audio and TV.

This planning is not only important to you now, but will be important when it comes time to sell your property. Smart Wired homes offer more flexibility to future owners, in turn providing more value.

### CCTV & Security

Security system will alert you if there is a problem at your home no matter where you are in the world. If there is a fire, a break in or even a flood the security system will contact you and provide you with as much information as it can. Combined with a surveillance system you can then connect and confirm the alarm before contacting the authorities.

Panic and medical alert systems allow you to trigger the system when you are at home. Which, when monitored allow you to notify the security company if you are in trouble. Silent alarms can be activated when under duress allowing the police to make a stealthy approach to keep you safe. 24 hour Monitoring can be had for as little as a dollar a day.

Modern attractive & simple to use touch screen interfaces make it a breeze to arm and disarm the security system and to check the status of all your zones.

We use a range of reputable surveillance and security products depending on system complexity and size from manufacturers such as Milesight, HIKvision ACT1 and AXIS Cameras, Leviton and DSC alarms, with Paradox and BOSCH sensors .
