A RESTORATION
THAT WILL
LEAVE YOU
ALL SMILES!

PUT A SMILE ON YOUR FACE QUICKLY, COMFORTABLY AND NATURALLY.

Using the most advanced non-metal composite materials, digital precision and natural design, your restorations will match existing teeth to provide a natural bite and smile.

Ask your dentist if a digital restoration is right for you.

Greater Precision

Restorative dentistry has evolved and now, digital technology allows an impression to be taken of your teeth with a digital scanner and your restoration created in-office. Matching your existing teeth, you are provided with a filling, veneer, crown or bridge using the most advanced non-metal composite materials resulting in a beautiful smile and natural appearance.

Digital Scans

The digital scanner uses state-of-the-art laser technology that is not only extremely precise but also as safe as the checkout scanner at the grocery store. Unlike conventional impressions that can be messy, unpleasant and cumbersome, a digital scan is clean, fast and comfortable.

Beautiful Results

The benefits of digital restorations go beyond same-day convenience. Your restorations will also look and feel completely natural. Digital precision means a perfectly comfortable fit. And, aesthetically, your metal-free restoration will match the look of your teeth for a beautiful, natural smile.
