UAV Sales, training and professional aerial data acquisition and processing services

Aerial Survey

With its LA300 UAV, ADA can capture aerial photogrammetry data covering a wide range of applications and industries including agriculture for land survey (2cm res), archaeology for site investigation, fluvial/cadastral surveys, high altitude surveys, land management, stock pile volume estimation, open-cast mining/quarrying, volumetric analysis and many more applications.

Precision Agriculture

ADA's LA300AG is a UAV specially designed for precision agriculture. It can survey large areas of agricultural land in detail and cost-effectively. It deploys a precise narrow-band MicaSense multispectral camera, suitable for high resolution analysis of vegetation and crop health as well as high quality ortho-mosaics and digital elevation models.

UAV Sales, service and training

ADA are the resellers in Africa for the Lehmann Aviation range of professional fully automatic UAVs. It offers a full sales, comprehensive training and after-sales service for repairs and spares.
