

Thanks for your interest in using more environmentally friendly materials.

My company is an authorized distributor of ExpandOS. We have discovered that many companies can easily improve their sustainability index scores by switching to ExpandOS & improve profitability per package at the same time.

ExpandOS is a tree neutral product, which means we only use Sustainable Forestry Initiative paper. It's also reusable, recyclable, and bio-degradable.

Pallet of 15pt, 18pt, and 22pt paper yield 1,000 cubic feet. This paper will expand to 25 times its original size once it goes thru our ExpandER machine which operates in your pack line and runs on the same energy it takes to keep a light bulb illuminated.

Our 26pt paper has passed FedEx tests shipping 40lb engine parts. It's a great alternative (it's the only green alternative!) to foam in place which has hazardous implications from the initial chemical reaction all the way to the landfill. We are in the testing stage of 30pt paper to see if we can handle objects weighing up to 75lbs.

Pending your companies needs we have 2 types of machines that run on the same paper. We have our standard machine and our rotary head machine which is 5 times faster than standard machine which is used for automation and very high volume facilities.

We've also partnered with an auto-bagging company, because a few of our clients can't have loose fill inside the package. So we have an automated ExpandOS bagging system that we offer as well.

I look forward to hearing your response and having the opportunity to earn your business of providing ExpandOS to protect your products and our eco-system at the same time!
