

Why Our Drycleaning is truly

“ORGANIC”

Safe For You

No Odor or Residue

Your garments will always be returned to you impeccably clean and free of any toxic substances. Our cleaning system has a US Patented sensor that detects the level of solution left in the garments and will not allow any of them to be taken out of the system until they are completely solution free.

Safe For The Environment

Biodegradable

The solution used in our drycleaning is biodegradable so it is not considered to be a ground contaminant.

Non Toxic - No Perc

We do not use perchloroethylene (PERC). The solution we use is Non-Toxic and has been used safely in cosmetics and food additives for decades before becoming a drycleaning solution. It has also been classified as a Non-Hazardous air pollutant by the EPA and does not require labeling by OSHA for toxicity

Less Solution Waste

Our cleaning system reduces the most solution waste. Because this system produces 100% clean solution for each load, it can be purified many more times before being discarded.

The Cleanest Results

100% Purified Solution

Our cleaning system has the most advanced distillation system that purifies the solution automatically after each load, so that your garments are always being cleaned in 100% clean purified solution.

Clean Solution Storage

Once the solution is purified, it needs to be stored in a tank until it's next use. If these tanks are not kept clean the freshly purified solution will become dirty again, defeating the purpose of distillation. Our storage tanks are set up to clean themselves, so that they always stay clean.

Impurity Free Garments

Our cleaning system uses a rotation speed that is fast enough to handle the lightweight of the solution, which means that all the impurities and solution are being completely extracted out of your garments.
