

INNOVATIVE TOOLING... SUPERIOR INSPECTION

High-accuracy EMAT inspection of unpiggable pipeline sections

Inspection without Excavation

Diakont's inspection teams use self-propelled robots to overcome inspection challenges of unpiggable pipelines:

- 100% non-contact internal ultrasonic inspection of 16"-54" pipes, using patented EMAT technology
- High-precision detection and measurement of indications; corrosion, wall thickness, SCC and dents
- Robots capable of navigating elbows and vertical pipe sections

Contact Diakont to learn more about how our ILI services can support your integrity management programs.

ABOUT DIAKONT

Diakont is a unique technology company that provides high-tech solutions which enhance the safety and economy of the pipeline and energy industries. With a North American service center located in San Diego, California, Diakont has a global workforce of over 900 highly-skilled employees who support pipeline inspection and asset integrity operations in the oil and gas, water and wastewater, and energy generation industries.
