

**Composition:** polymethylsiloxane polyhydrate (methylsilicic acid hydrogel) – 70 %, purified water – 30 %

#### Recommended dosage

- **Adults and children over 15:** 15–22,5 g three times a day (15 g = 1 tablespoon).
- **Children aged 7–14:** 10 g three times a day (10 g = 2 teaspoons).
- **Children aged 1–6:** 5 g three times a day (5 g = 1 teaspoon).

Wash down with a sufficient amount of fluid (200 ml for adults and children 7 and over; 50–100 ml for children aged 1–6).

A sufficient intake of fluids is also necessary as part of the basic treatment of acute diarrhoea.

Use 1–2 hours before or after a meal or taking medication.

**A clean body  
means less illness**

#### Available in a pharmacy near you

Packaging: tube 90 g, tube 225 g, sachet 15 g (10 sachets per pack)

**Help against digestive  
tract problems, diarrhoea  
and allergic disorders with  
gastrointestinal symptoms**

 Patented in Switzerland

**COMPLEX CARE FOR  
THE WHOLE FAMILY**

Also suitable  
for pregnant and  
breastfeeding women

**Enterosgel® is a medical device that binds and removes harmful and toxic substances, allergens and by-products of metabolism. It is safe, not being absorbed by the body, and is eliminated along with the bound harmful substances in the stool.**

**The gastrointestinal tract plays an important role in keeping one healthy because:**

- it delivers essential nutrients to the body
- it is one of the routes harmful substances and toxins are removed from the body
- it functions as a barrier and has an immune system function

An important step on the road to recovery, optimal health and long life is detoxification – the removal of harmful substances, toxins and pathogenic microorganisms from the digestive tract.

Each of us should indulge in detoxification from time to time.

We routinely inhale harmful substances from the air and consume them in our food. The body also produces an increased amount of waste products during excess stress, illness, pregnancy, sport, smoking or consumption of alcohol.

A majority of the body's resources are thus focused on detoxification and not on fighting against causes of illness.

**Detoxification leads to improved health and digestion, increased resistance to infection, and helps the body to function optimally.**

**+ Detoxification for allergic afflictions with gastrointestinal symptoms**

The skin often mirrors gastrointestinal disorders. Various inflammations, rashes and pimples appear on the skin as a result of food allergies, which primarily affect the digestive tract. Likewise, certain skin rashes are often connected to metabolic disorders inside the body. Enterosgel®, used internally, rids the organism of the toxic burden.

**+ Intestinal infections, diarrhoea, irritable bowel syndrome and other digestive tract problems**

Enterosgel® destroys and removes pathogenic bacteria and toxic substances from the body and normalises the state of the digestive tract. It regenerates the intestinal villi and reduces inflammation of the intestinal mucous membrane. We recommend having it in your medicine cabinet at home as well as taking it with you to exotic destinations.

**+ For children over one year old**

Enterosgel® is safe and effective for digestive problems, diarrhoea, allergic afflictions and gastrointestinal symptoms. It is not absorbed and contains no gluten, lactose, sweeteners or preservatives.

**+ For pregnant and breastfeeding women**

During pregnancy the metabolism increases markedly and there are many waste products in the body. Use of Enterosgel® reduces the burden on the organism.
