Managed Process Services

COMPLIANCE AND EFFICIENCY FOR YOUR PROCESSES

PEDCO

CHALLENGES

COMPLIANCE REQUIREMENTS ARE INCREASING

Regulatory and organisational requirements are becoming ever more demanding. Project productivity should be enhanced and the quality standards adhered to.

PROJECT MANAGEMENT SPECIFICATIONS ARE BECOMING STRICTER

Projects have to be executed even more leanly and yet with a thorough securing of all the regulatory requirements, and applicable regulation changes within the course of the project have to be integrated.

MARKETS CALL FOR RAPID AND COST-EFFECTIVE PROJECTS

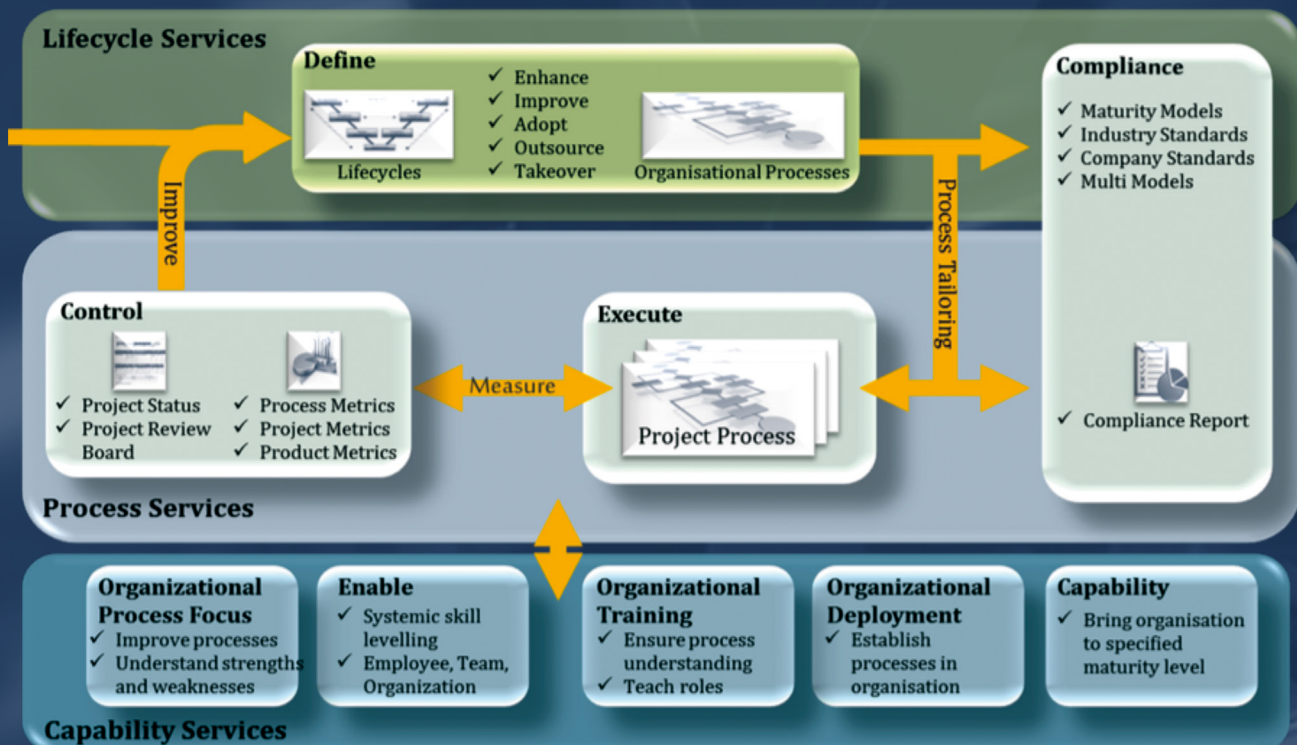

Innovation cycles are getting shorter and development projects have to get by with fewer resources. At the same time the quality requirements and demands of the regulatory directives are increasing.

GROWING NUMBER OF PROJECTS WHICH ARE SKEWED

Projects are getting more demanding – the requirements for accuracy of estimates and for risk management in development projects are increasing. The projects that have been started must be run efficiently and reliably.

OUR SOLUTION: PEDCO –Managed Process Services

VALUE PROPOSITION

EFFICIENT, RELIABLE AND FLEXIBLE PROCESSES

Processes are to be designed in a flexible way and at the same time continually improved. This task calls for extensive knowledge and considerable experience in dealing with software development processes within the regulated environment.

SPECIALIST TEAMS

The continuous maintenance and improvement of software development processes requires the experience and expertise of a team of specialists. The teams have to be continually trained for this purpose. The exchange of experience helps in establishing the improvement process at a high level.

PROJECT AND COMPLIANCE MONITORING

Your process landscape needs to be periodically checked and examined to ascertain its strong and weak points. The same applies for your project portfolio. Here, regular unbiased status reports help to keep your projects on track and to spot any emerging risks in good time and mitigate them.

PROCESS TRAINING AND SKILLS MANAGEMENT

Regular training has to be given about the processes and roles, and the skills of your staff have to match the role requirements. This is to ensure that your processes are well established in your organisation and adhered to.

THE FACTORY

Our Lifecycle Services support you in all matters relating to the assessment, production or transfer of your existing development processes, and their management. They serve the management, production and continuous further development of the processes offered to the customers.

THE TRANSMISSION

The Process Services form the core of our solution. They are all centred on a tailor-made process framework. This consists of several process models. A tool-based platform supports the team in selecting and tailoring a process model for a specific project. The platform also automatically produces a project-specific process web.

THE LUBRICANT

Our Capability Services ensure that the processes are actually practised in a reliable and efficient way. They ensure that the employees' understanding of the processes is ensured and that employees' skill levels match with the requirements of the specific roles.

THE COMPANY

We support competitive European enterprises in the efficient and successful implementation of demanding process plans within regulatory environments.

We help your organisation in the set-up, selection, operation and further development of lean and effective processes. We offer a comprehensive range of support activities covering your whole process landscape.

In addition we offer the outsourced operation of a process framework tailored to the customer's requirements. This allows you to direct your projects within the regulatory environment in compliance with the rules, efficiently and with transparent costs.

We define and improve your processes and thus simultaneously combine the requirements for compliance, efficiency and cost-transparency. We ensure that your processes turn into a competitive advantage and the compliance requirements are adhered to.
