

Reference images of cable

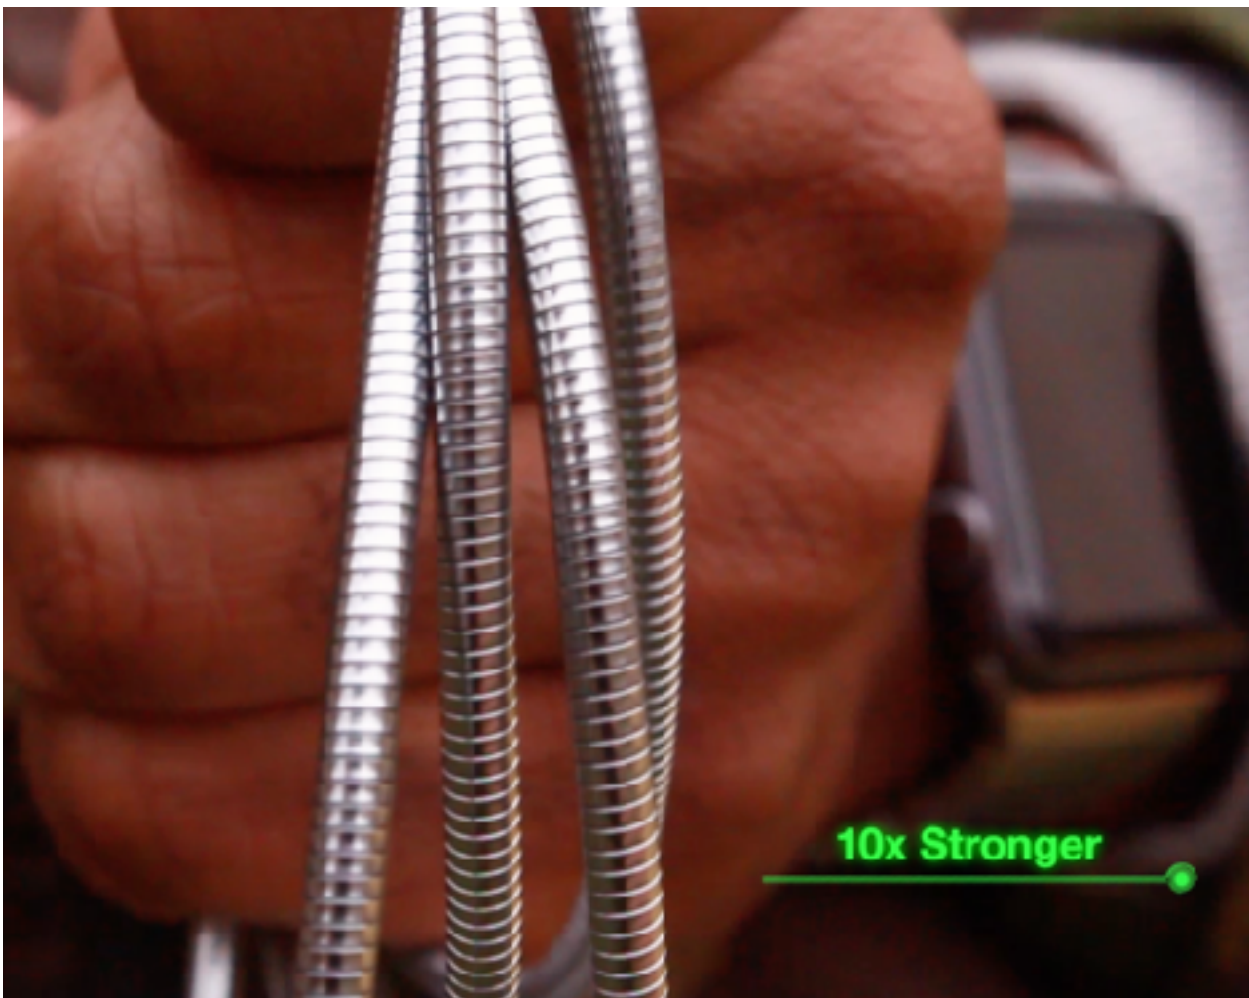

Image 1

We need 3d illustrations of the power series steel cable in all four colors. Below is an example of the profile we want the renderings in.

We want each color rendered to a profile similar to this standing snake....

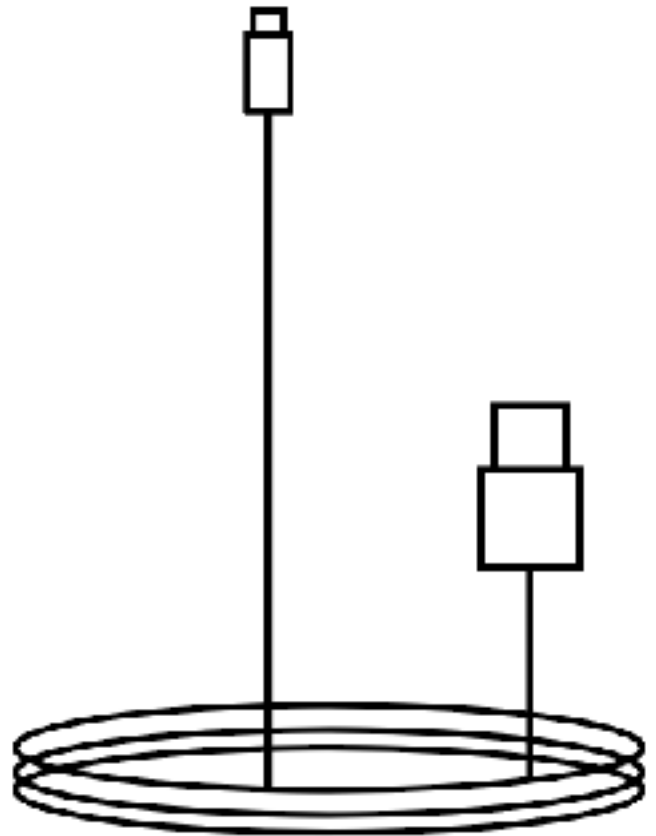

Image 2

Image 2 will be used to illustrate the bend tolerance of the cable before shorting out. We pretty much need this exact image(minus the text) just with the cable on the right replaced with a 3d illustration of our power series steel cable.

Image 3

Image 3 will be the cover image for our crowdfunding campaign. It will be the first image seen by any potential backer so it must be really attractive. What we want to do is have an image of all for cable bursting through a fire burst. In our crowdfunding video we blast the cable with a Flame thrower so we really want to drive that fire resistant effect home on the cover image. Below are more examples to help with direction.

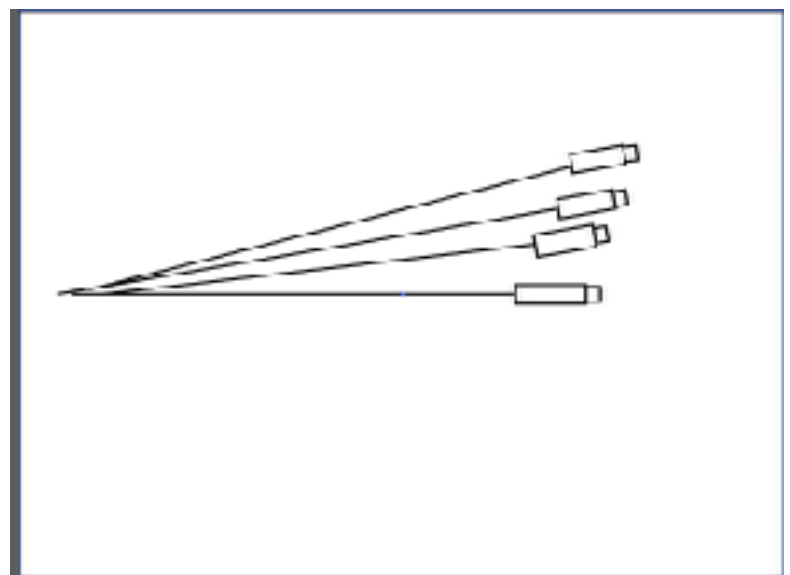

My Crappy rough edit:

This is many to show placement and what I'm sort of going for idea wise(horrible execution:)

What we want to show is an image of the four cable colors bursting through a fire burst.

Angle of cables

The image on the right shows the angle we want the cables positioned at. We also like how the image show the product in 3 dimension. We want the same type of effect in the 3d illustration of the cables.

Bellow is the image to give you some direction on the style of fire burst that we want the cables to shoot through and the placement of it.
