

MIND BLOWING *fun!*

Our budding scientists will explore the amazing world of science, enjoying a fascinating summer experience full of real world science...from observation of celestial bodies in outer space, and the wonders that comprise the world around us, to the physics that govern the forces of our world. Concepts come alive with amazing hands-on science experiments that they can explore and discover for themselves.

The Montessori experience is a unique, integrated curriculum that utilizes all the senses to make an active learning environment both fun and exciting. The Montessori student is naturally eager for knowledge and initiates their own learning in a supportive, thoughtfully prepared learning environment.

art *with a scientific flare!*

Creativity abounds as the children draw, paint, sculpt and create amazing arts and crafts. The children's art, inspired by science, will drive them to explore the many ways they can utilize their new found scientific knowledge into the creation of beautiful works of art.

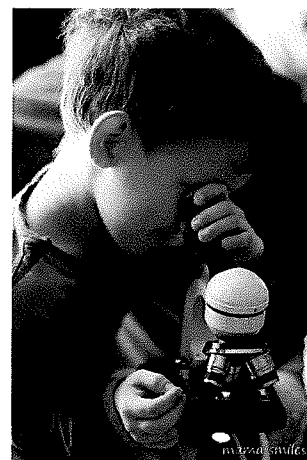

Active Bodies

The children are amazed by the laws of physics. They will test how their bodies respond to these laws of nature. Just try to defy them! Our young physicists will use the scientific method to test their hypotheses. Sir Isaac Newton would be proud!

Real science

Children are fascinated by science. To excite their inquisitive minds, they will have laboratory space where they will use the scientific method and various tools to explore the many facets of science. This interactive gateway to the many wonders of their world is specially developed for their age group. Working in collaborative groups, conducting a wide range of experiments and having an amazing time will make for an astonishing summer!

EXPERIMENTS *are fun!*

Our lab rats will learn interesting science and technology facts by experimenting with many different materials that react in surprising ways. They will learn how to conduct experiments, practice safety procedures and most importantly, have fun! All of our experiments are child-friendly and safe.

The science of Cooking

Our young chefs will learn how a pinch of chemistry and dash of physics makes a most delicious treat. These experiments will spark a life-long love of cooking! The children will be creating amazing concoctions, bubbling and foaming with delicious and tempting aromas!

trips & Visitors

We welcome many special guests to our Summer of Science. These exciting programs will bring a smile to the faces of our young scientists. ~~Our kindergarten and elementary students will also explore their universe with special trips outside of school to enhance their studies.~~
