WHAT IS SINAFTIN AND WHAT IS IT USED FOR?

Sinaftin is a toothpaste for daily use against aphthous ulcers, particularly of chronic nature, other mucosal inflammations in the mouth and small lesions, such as bite marks and bruises caused by prostheses and orthodontic appliances.

Sinaftin is also suitable for the supportive treatment of gingivitis and oral mucositis. Sinaftin can be used both for acute treatment as well as for preventive purposes.

Facts and benefits:

- + Sinaftin is used for acute treatment as well as for preventive purposes.
- + Highly effective and scientifically documented.
- + Sinaftin eases the pain immediately and accelerates the healing process.
- + With regular use the recurrence of aphthous ulcers is reduced or completely prevented.
- + 90% of patients would recommend Sinaftin.
- + As simple as brushing your teeth.

HOW IS SINAFTIN USED?

Sinaftin is a toothpaste used twice a day for oral and dental care. The patient applies a pea-sized amount of Sinaftin on a dry toothbrush. During the cleaning process only small amounts of water should be used in order to connect the active substances with the saliva to be spread in the oral cavity. By reducing the use of water the maximum effect is achieved in the oral mucosa.

In the case of an acute condition Sinaftin can be applied directly to the affected area with a cotton swab or a clean finger. Allow it to work for about two minutes and then rinse it out of the mouth using lukewarm water. Any consumption of food and drinks should be prevented for at least 10 minutes. Repeat the treatment four to five hours later.

For patients with chronic inflammation Sinaftin should permanently replace the use of any conventional toothpaste.

FURTHER INFORMATION:

Sinaftin contains Fluoride and Xylitol, prevents the formation of plaque and provides excellent protection against caries and periodontal diseases. Sinaftin also reduces the sensation of pain for patients with sensitive tooth necks. Thanks to its unique composition the dental tubules are blocked for external stimuli.

Sinaftin is free of mucosal damaging surfactants (foaming agents such as SLS) and does therefore hardly foam. However this in no way diminishes the effectiveness of brushing the teeth. Sinaftin is designed and manufactured in Sweden. The product has a scientifically proven and documented efficiency.

Ingredients:

Aqua, Glycerin, Citrus dulcis, Disodium cocoamphodiacetate, Polysorbate 60, Silica, Cellulose gum, Glycyrrhiza glabra, Xylitol, Methylparaben, Sodium fluoride.
