

T-Shirt Creation Reference

Guide for Photoshop Template

Creation Reference | Place Your Design

After downloading the Photoshop template file, **T-shirt_template-Merch_by_AMZN.PSD (1)**, you will be able to place your art into the document to preview it with our available shirt colors and shirt types (men's women's and kid's).

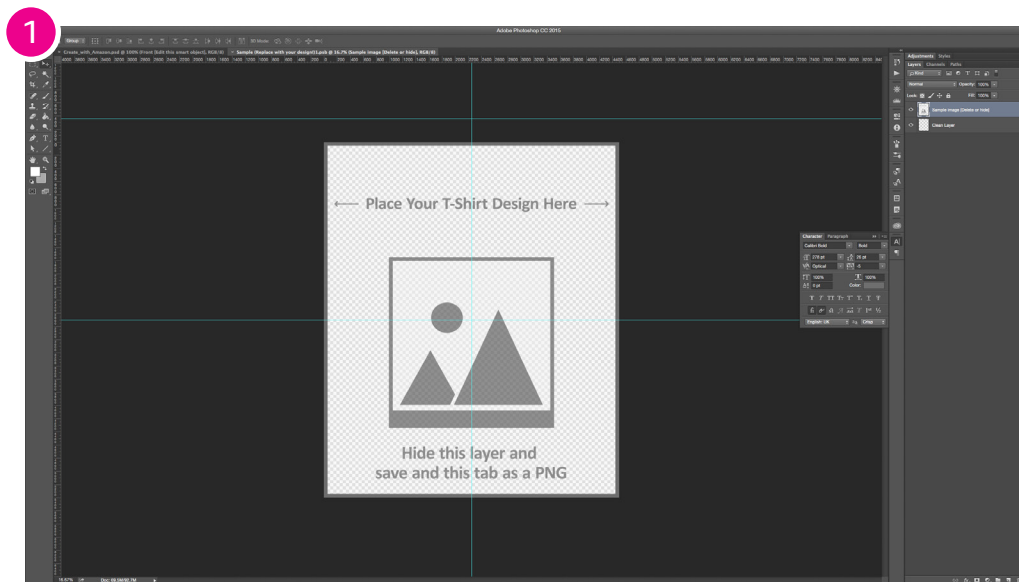

When you open the template file, right-click on the layer "Front [Edit this smart object]" or "Back [Edit this smart object]" (2), and select **Edit Contents (3)** from the menu. After you select this option, a new tab will open within Photoshop.

Creation Reference | Replacing Sample Art

Within the new tab, you will see our sample artwork **(1)** (provided to show how the design will layout on your shirt). Start by deleting this layer, “Sample image [Delete or hide]”, and adding your artwork to the layer titled Clean Layer **(2)**.

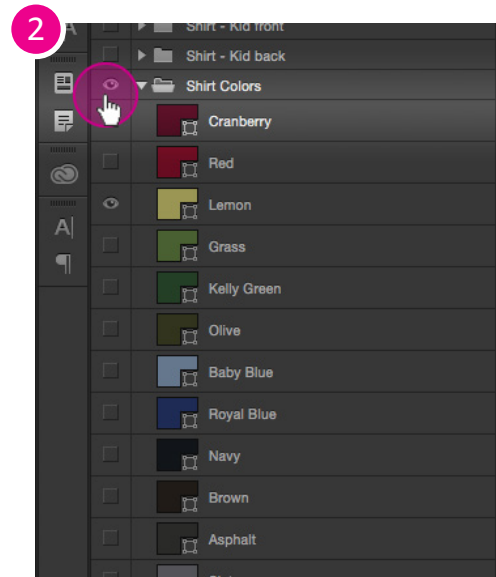

To preview your design, save your progress on the new tab then switch back to the first tab. The sample artwork should now be updated to reflect your art on the new tab.

Creation Reference | Preview Shirt Colors

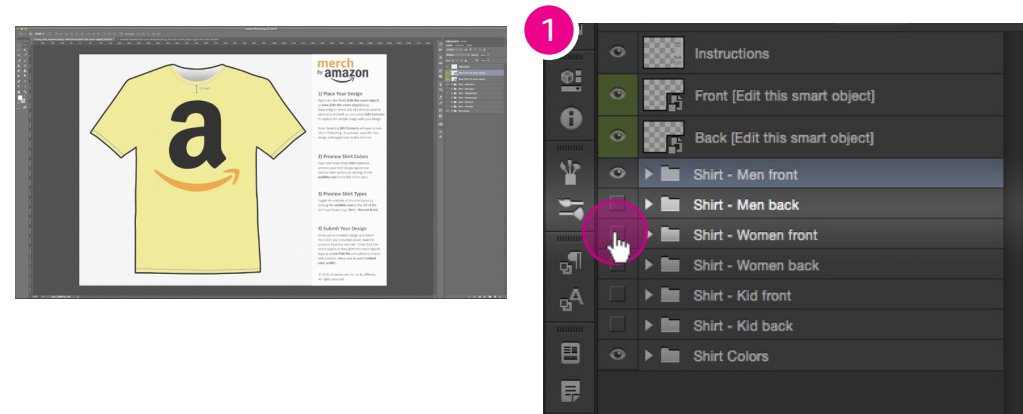

Once your design is set on the shirt (1) (by editing the smart object), you can preview the available color options by opening the **Shirt Colors** folder and toggling the visibility of the color layers (2).

Each layer contains a sample of the shirt color and the related name (selectable on our website).

Creation Reference | Preview Shirt Types

In addition to the shirt colors, you can also preview your design against three shirt types: men, women and kids. To preview against these shirt types, toggle the visibility of the shirt type layers (1) (e.g., Men's front).

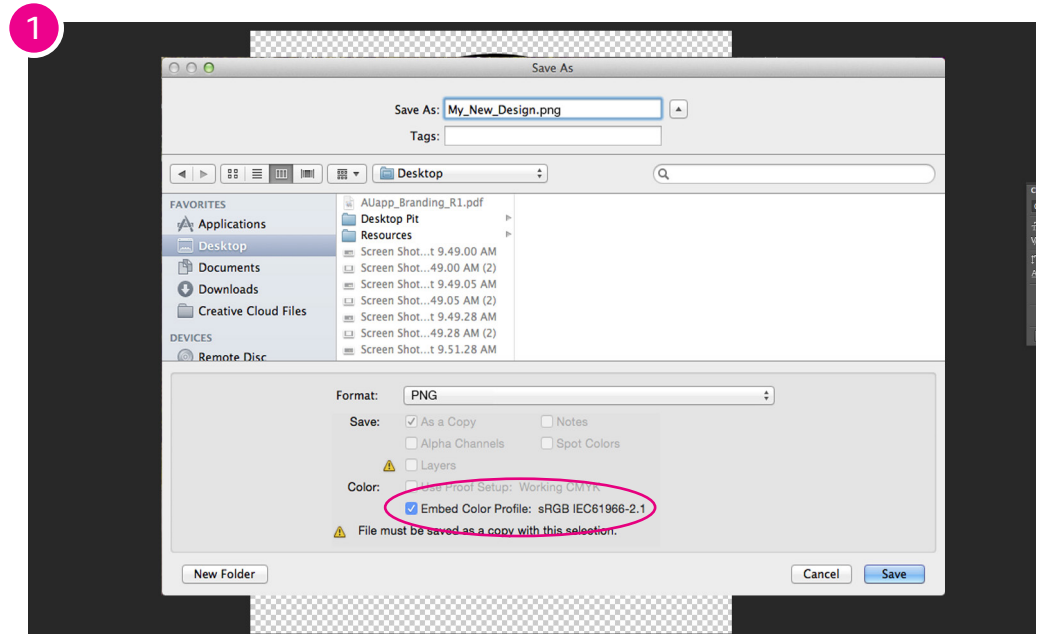

Creation Reference | Save Out Your Design

After previewing your design on the Photoshop template, go back to the new tab and save your artwork out as a new **PNG** file **(1)**. This will save your artwork at 300 ppi and 15" x 18" (4500 px by 5400 px) dimension.

Note: Select "Embed Color Profile" option while saving.

This will be the asset that you upload to **Merch by Amazon**.
